GOING GREENER

We're working toward a "greener" Kershaw every day.

Our Tualatin, Oregon manufacturing facilities employ strategies that reduce our use of non-recyclable materials and help us efficiently reuse all the materials we can. Our new offices were built with sustainable materials and practices in mind. And our packaging uses both recyclable and recycled materials.

Greener Manufacturing

Naturally, knife manufacturing requires the cutting and grinding of large quantities of steel. The machines that do this are lubricated with oil, while special coolant is used to keep both the machines and the steel cooler. Kershaw collects and reuses both the oil and the coolant to cut down on the use of petroleum products. All scrap metal is sent to a recycler. Even the metal-laden sludge from the grinding machines is separated from the coolant and recycled.

Our facilities use fluorescent light bulbs and we recycle both bulbs and batteries. And, of course, our lunchrooms provide recycling bins for bottles and cans.

Greener Offices

When we built the new offices on our Tualatin campus, our architects and construction team were asked to make sustainable choices. The offices were designed to be especially energy efficient. For example, the windows are tinted to help retain heat in the winter and cooling in summer. Sensors were installed so that lights automatically turn off in offices that are empty for a certain period of time. The carpet tile that was installed has a very low VOC (Volatile Organic Content) and PVC-free backing. (There are environmental concerns about PVC's toxicity.) All adhesives that were used in the construction are low VOC, as is the interior office paint and primer.

And, of course, we recycle office paper, cardboard, and plastics.

Greener Packaging

We know over-packaging is a key environmental concern. Kershaw works to be as sustainable as possible—while still protecting our products to ensure they reach our customers in perfect condition. For example, Kershaw recently switched to all-recycled shipping boxes. Our packing material is recyclable, as are our cardboard knife boxes and plastic "clamshell" packing.

As we move into the future, Kershaw will continue to strive to be an ecologically responsible company—from our manufacturing processes to our office practices and procedures.

The grooves in these new knives are 3-D machined in an unusual striated pattern that just plain looks cool. Of course, looks aren't everything. So these groovy knives, designed by custom knifemaker RJ Martin, are also designed to deliver top performance. For hardness, corrosion resistance, and wear resistance, both the new Zings and the Grooves feature high-carbon Sandvik 14C28N stainless-steel blades.

The Zings pair this grooved blade with a sturdy handle of injection-molded Polyimide®—in zingy orange or classic black. The handle is strong, lightweight, and offers a secure grip in most any environmental condition—hot or cold, wet or dry. A locking stainless-steel liner ensures the blade locks securely for safe use.

You can also get into your groove with the original Groove with its slightly recurved blade and decidedly curved G-10 overlays on 410 stainless-steel handles. In the mood for a darker Groove? Check out the Tanto Groove in pure matte black. The Tanto Groove sports a Tungsten DLC-coated Tanto-style blade and Tungsten DLC-coated stainless steel handles with black G-10 overlays. All you see is black—except for the gleam of the shaving-sharp Kershaw edge.

Both Zings and Grooves feature the Flipper ambidextrous manual opening system for smooth and easy opening. But if you don't want to flip, the Zings can be opened with the handy built-in thumb studs. All models also include a removable pocket clip that can be reversed for tip-up or tip-down carry.

How do we make the Flipper work?

Unlike our SpeedSafe® knives, Flipper knives have no torsion bar or other device that provides the opening assist. Yet they still offer smooth-and-easy ambidextrous opening using heavy index-finger pressure or a small flip of the wrist.

This is only possible because of the extremely tight tolerances to which Kershaw knives are made. No other folding knife feels like a Kershaw. As the blade moves out of the handle, the feeling is smooth as silk. Then the blade locks into position with authority. State-of-the-art manufacturing technology combines with the expertise of our knife artisans to ensure each Kershaw is built with extreme precision for extreme performance—and the smoothest fit and finish in the industry.

Blade Magazine honored the R.A.M. as 2007's Most Innovative American Design. Since then, we've added more R.A.M. models—including models with partially serrated blades, as well as our new Tungsten DLC-coated matte black versions.

All R.A.M. (Restraint Articulated Mechanism) models open with the Flipper ambidextrous manual opening system or the built-in thumb studs. Yet when a knife is this bold, safety is a key consideration. That's where the R.A.M.'s Hawk-Lock® comes in. The patent-pending Hawk-Lock® keeps the R.A.M.'s blade safely locked into position for use—and releases easily for closing.

Choose the original R.A.M.s for satin-finished Sandvik 14C28N stainless-steel blades plus a black anodized-aluminum handle with secure-grip G-10 overlays. Or go all-black with the new R.A.M. 1910CKT and 1910CKTST. They feature the same 14C28N stainless-steel blades with the addition of wear-resistant Tungsten DLC (Diamond-Like Carbon) coating for extra performance.

About the Hawk-Lock®

All R.A.M.s feature the patent-pending Hawk-Lock® for incredible security and simplicity of operation. R.A.M.s open easily using the ambidextrous Flipper or built-in thumb studs. Once the blade is open, the Hawk-Lock® automatically locks it into position. When you're ready to close the blade, pull the Hawk-Lock® slider back toward the knife butt and fold the blade in. Simplicity itself.

Horsepower

From the efficient design of its blade to the powerful, contoured handle, everything about the Ener-g and Ener-g II is meant to conserve your energy by putting the knife's built-in energy to work.

14C28N stainless-steel blades provide superior hardness, excellent corrosion resistance, and the ability to be sharpened to a precision edge. Textured black G-10 handles offer a grip that's extra secure. Choose the original Ener-g or the larger Ener-g II. Both open quickly and easily with the Flipper ambidextrous opening system.

For a different kind of energy boost, check out the OverDrive Flippers—the OD-1 and the OD-2. Designed by Lee Williams, these sleek new pocket performers come fully equipped with the new OD Flipper opening system—a variation on the original Flipper system.

OD-2 Model 1770

Steel.....8CR13MOV stainless-steel
Handle...Glass filled nylon
Liner.....410 stainless-steel
Lock.....Locking Liner
Blade.....2-1/4 in. (5.7 cm)
Closed...3-1/8 in. (7.9 cm)
Weight...1.4 oz.

OD-1 Model 1775

Steel.....Sandvik 14C28N stainless-steel
Handle...Textured black G-10 front &
410 stainless-steel back
Liner.....410 stainless-steel
Lock.....Frame Lock
Blade.....2-15/16 in. (7.5 cm)
Closed...4-1/8 in. (10.5 cm)
Weight...3.4 oz.

Includes removable/reversible
3-position pocket clip

Here's what's different: when the blade is open, the Flipper protrusion folds into a recess in the liner, giving the OD a slim, smooth line all the way down. To complete the streamlined look, the OD-1 has a two-toned handle: textured G-10 on one side and 410 stainless steel on the other, plus a secure frame lock. The OD-2 features high performance glass-filled nylon scales on both sides and a locking liner for safety.

Power

How to flip a Flipper

Hold the Flipper knife in your dominant hand, blade side up. Be sure to keep your fingers away from the "shaving sharp" blade. Place your index finger on the ridged part of the blade protrusion. Pull back smoothly on the blade protrusion at the same time as you flick your wrist forward slightly. The combination of the pull-back and the slight flip will open the knife and lock the blade into position. Option two, apply heavy index-finger pressure with a quick pull-back toward the butt on the handle. Both methods will open a Flipper knife quickly and easily. Kershaw's silky operation and precision fit and finish enables our Flipper knives to open with ease.

LANAR
Model 1750

ARE

Nature's lahar is a fast-moving volcanic flow—the kind that famously erupted from Washington's Mt. St. Helens. Kershaw's Lahar, named for this type of swift flow, features a beefy recurve blade of VG-10 "super steel" and opens quickly thanks to the Flipper ambidextrous manual opening system. The VG-10, which is the same steel found in KAI's elite Shun kitchen cutlery, is extremely hard—60-62 on the Rockwell hardness scale. It is also stain resistant, tough, and takes and holds a precise edge.

The dramatically styled blade offers superior cutting performance, even when it comes to heavy-duty tasks, while the textured G-10 scales and curved handle design provide a superior grip even in wet or other adverse conditions.

Another Kershaw hottie is the sleek Skyline. It's a super slim Flipper knife that's ideal for pocket carrying. It features a blade of 14C28N stainless steel chosen for its hardness, excellent corrosion

HOT!

SKYLINE Model 1760

resistance, and its ability to be sharpened to that perfect Kershaw "shaving sharp" edge. For good looks, the blade has an attractive

"stonewashed" finish. Textured G-10 handles in basic black provide a secure grip and a sturdy locking liner keeps the blade safely in place until you release it.

LAHAR Model 1750

Steel.....VG-10 stainless-steel
Handle...Textured black G-10
Lock.....Locking liner
Liner.....410 stainless-steel
Blade.....3-1/2 in. (8.9 cm)
Closed...4-7/8 in. (12.3 cm)
Weight...5.5 oz.

Both the Lahar and the Skyline come with a removable pocket clip that can be reversed for tip-up or tip-down carry.

WE LET THE DOGS

We don't call them Junkyard Dogs for nothing. With their big bark and heavy-duty build, they're exactly what knife enthusiasts have been howling for. They're the made-in-the-USA Junkyard Dog, Junkyard Dog II, and Composite Junkyard Dog II. All have a fierce look and sturdy stainless-steel construction for heavy-duty performance each and every time.

The original JYDs sport a blade of Sandvik 14C28N, a stainless chromium steel that provides high hardness and excellent corrosion resistance, while the Composite JYD II features our high-performance composite blade of 14C28N and CPM-D2. You'll also appreciate the copper accent that highlights the fusion between these two premium steels in our composite blade.

The handle of the JYD is pure 410 stainless steel for impact strength and corrosion resistance. It also boasts a handsome "riveted-steel" design and Air Force marking that add to this puppy's super-tough appeal. The larger JYD II has lighter weight G-10 scales attached to a sturdy steel frame—as does the Composite JYD.

The G-10 offers extremely high mechanical strength and top performance in both wet and dry conditions. In the JYD II, the good looks are enhanced by the JYD riveted-steel pattern, CNC-machined into the G-10. The Composite JYD features simple textured black G-10 that offsets its more complex blade design.

All JYDs feature Kershaw's Flipper opening system for easy opening. A frame lock secures the JYD blade in place. Even better, JYDs are value priced. And that great price is just one more reason they're sure to appeal to a wide range of knife users who want a tough, versatile knife that's built for strength and performance—and offers a doggone great look.

WHEN IT COMES TO YOUR WORK KNIFE...

a knife that you use a lot, a knife you depend on—you need a knife that fits your hand perfectly. After all, it's going to spend a lot of time there. That's why you'll like this collection of ergonomically contoured knives engineered by Kershaw.

The newest addition is the PackRat. The PackRat's curved and textured G-10 handles curve smoothly into the palm of your hand for a secure grip. With its organic shape and bold curves, the new PackRat will make knife enthusiasts want to pack home several of these great new knives. Equipped with SpeedSafe® manually assisted opening,

the PackRat features a premium blade of high-carbon Sandvik 14C28N stainless steel. This quality chromium steel provides excellent hardness, as well as corrosion and wear resistance. The PackRat offers a secure grip with textured G-10 scales overlaying pure stainless steel liners. SpeedSafe® makes it easy to open, too, while the precision design ensures it's an extremely practical knife that's ideal for performing a wide range of everyday tasks.

Two other additions to a great knife collection are the Needs Work and the Oso Sweet. The Needs Work is a tough, versatile knife that demands to be put to work on any cutting task you may have. The blade is Sandvik 14C28N, a stainless steel that provides high hardness as well as excellent corrosion and wear resistance. The handle is made of contoured Polyimide®, an engineering polymer that exhibits an exceptional combination of thermal stability and mechanical toughness.

The Oso Sweet is a classic design, but with a tasty twist—a handle of injection molded glass-filled nylon with a distinctive “scales” pattern. The Oso Sweet offers a blade of high-quality AUS6A stainless steel for toughness and edge retention. Both the Needs Work and the Oso Sweet feature the patented SpeedSafe®

manual assist for smooth, easy opening.

Perhaps best of all, both are value priced, so it's easy to add them to your collection. Knife users who appreciate good looking, hardworking knives, a SpeedSafe® design—and a great price—are sure to want to add both the Needs Work and the Oso Sweet to the menu.

Born to Be Webbed

OCC Edition Knives

The Orange County Chopper Leek and Blur will definitely get your motor running. From freeway to driveway, they're born to be wild—and to quickly become some of your favorite tools.

Both models get going with premium 14C28N stainless-steel blades that not only hone to an incredibly sharp edge, but re-sharpen easily and strongly resist corrosion, too. For additional performance—and sheer good looks—the OCC Leek features matte black Tungsten DLC coating on the blade. Inspired by Orange County Chopper's Web bike, the OCC Leek has the OCC spider-and-web image CNC machined from 410 stainless steel and mounted on the Leek's basic black anodized-aluminum handle. And yes, the OCC Leek features SpeedSafe® manually assisted opening. SpeedSafe® lets you deploy the blade smoothly and easily with just one hand, either left or right. It comes with a secure locking liner and a removable/reversible pocket clip for tip-up or tip-down carry.

The OCC Blur provides the same multi-tasking ability and super-secure grip as all the Kershaw Blurs—but with a look that will really start your ignition. Its 14C28N stainless-steel blade offers premium performance, strength, and excellent corrosion resistance. And the new OCC Blur's anodized-aluminum handle features a raised spider web, spider, and OCC logo machined into it.

OCC LEEK Model 1660OCC

Test Ride This!

IT'LL MAKE YOUR EYES WATER.

Naturally, the OCC Blur also features the SpeedSafe® manually assisted opening. SpeedSafe® and a handy thumb-stud make it easy to swivel the blade out of the handle for convenient use on the road or around the house.

Our Inspiration

The OCC Web is the inspiration behind our new OCC Leek and OCC Blur. It's a seamless marriage of traditional technique and modern technology—just like Kershaw knives.

The product of sophisticated computer modeling process, the bike's distinctive elements were created using a state-of-the-art, 5-axis flow cut system to ensure the sharp, intricate edges that define this look. A sleek OCC razor

BROODER LADDER FIRE

SPECBUMP
Model 1596

SPEEDBUMP
Model 1595

OFFERS MULTI- TASKING PERFORMANCE

Both the Speed Bump and the Spec Bump feature an innovative blade with a unique look and high-performance function. The recurve blade was specifically designed to provide minimal mass, maximum performance, and extreme multi-tasking efficiency. The recurve provides ideal leverage in tough cutting situations, while the precisely centered point handles piercing tasks with style and ease. Both the Speed Bump and Spec Bump feature SpeedSafe® manual assist for easy opening and smooth operation. Both also have the patented Stud-Lock®, which keeps the blade safe and secure—in the open position with a 3-point lockup.

For a lighter weight knife, choose the Speed Bump.

It offers a Sandvik 14C28N stainless-steel blade for toughness, durability, excellent corrosion resistance and edge retention. Its lighter weight is, in part, due to a tough, but light-weight Akulon® handle. Akulon® is an engineering plastic that retains its outstanding mechanical properties over a wide temperature range and in diverse operating environments.

For an extra-secure grip, Kershaw enhances the Speed Bump with a Santoprene® overlay. Santoprene has the flexibility and durability of natural rubber, but with a much longer life.

When we set out to build the next generation of Bump knives, we set ourselves the task of calling for some very demanding “specs.” The result is Kershaw’s Spec Bump. We started with a premium-quality S30V steel blade. This high-end stainless steel holds an edge extremely well and manages to remain tough even at its high hardness—around 60 on the Rockwell hardness scale. For extra durability and performance, the blade is coated

**Made

First and foremost is the Offset's rugged and exceptionally complex blade geometry. Manufactured by state-of-the-art Metal Injection Molding (MIM) and hot isostatic pressing, the Offset's blade offers two bevel geometries, hollow grind and flat grind.

The next stage of the process, sintering, removes the binder. Once it is sintered, the blade has reached its finished size and is at a density of 94%. Finally, the blade is HIPed under extreme pressure, approximately 32,000 psi, to increase the metal density to 99.7%. For extra durability and good looks,

To keep the blade safely locked in the open position, the made-in-the-USA Offset also has Kershaw's convenient and secure Stud-Lock®. It all combines to create an advanced, award-winning knife you'll be proud to own.

ADVANCED BLADE

This provides incredibly versatile cutting power for a wide variety of situations. The net-shape MIM process produces solid metal parts that combine the design freedom of plastic injection molding with material properties similar to wrought metals. With its inherent design flexibility, MIM is capable of producing an almost limitless array of highly complex geometries—a fact the Offset takes advantage of in order to create a quality 440C stainless-steel blade with complex, true 3-D geometry.

Here's how the process works: A blade mold is created and filled with a combination of powdered metal and binder. When it comes out of the mold, the blade is 20% larger than its finished size.

Kershaw adds a grey Chromiun Nitride blade coating.

The Offset is also recognized for its dramatically textured, lightweight G-10 handles. With their deeply 3-D machined

"spider web" pattern, the Offset's G-10 handles are as uniquely styled as its award-winning blade. On the practical side, the G-10—which is an electrical and mechanical grade of glass cloth laminate impregnated and cured with epoxy resin—offers high strength, excellent electrical properties, and chemical resistance even in humid or moist conditions.

Lock.....Stud-Lock®
Liner.....410 stainless-steel
Blade.....3-3/4 in. (9.5 cm)
Closed...5-1/4 in. (13.3 cm)
Weight...8.5 oz.

GEOMETRY FROM ADVANCED TECHNOLOGY

The SpeedSafe® “Double Pumper”

The Offset also wins acclaim because of its special Double Pumper SpeedSafe® configuration. This is SpeedSafe® manually assisted opening—plus. The Double Pumper features two torsion bars in order to ensure easy assisted opening for folding knives with larger blades—such as the Offset.

*There are some very good reasons
Blade Magazine recognized the Offset
as the 2005 Knife of the Year.*

Since their introduction, members of Kershaw's Chive family of knives have received awards for innovation, value, and quality. And no wonder. Chives are the perfect pocketknives. Closed, each Chive is less than 3 inches long—ideal for pocket carry. They also offer top quality function—including Kershaw's SpeedSafe® ambidextrous manual assist for smooth, easy opening by both right and left-handed users. And, of course, they're made of top quality materials. Each blade is manufactured of high-carbon 420HC stainless steel for good edge retention, easy re-sharpening, and excellent toughness.

Even better, you can take your choice of many different styles of Chives. There's bound to be one for just about every taste. Some also feature high-tech coatings for enhanced performance and aesthetic appeal. On one end of the spectrum are the original Chive and the Black Chive. Both blade and handle are pure stainless steel. The Black Chive is coated with black Tungsten DLC coating for corrosion resistance—and just plain good looks. For those who prefer a silvered look, the Polished Chive is buffed to a high-shine finish that offers a simple, but rich look.

At the other end of the scale is the Rainbow Chive, which features a durable Titanium-oxide finish in all the colors of the rainbow. Our newest handle is anodized aluminum in fashionable pink. All Chives feature the Safety Tip Lock to ensure the blade stays securely inside the handle until the user releases it, as well as a removable pocket clip for easy carrying. The Chive may be the smallest member of the "Onion" family, but it's got all the advanced features knife users demand.

Brilliant Knives

Just pull back on the blade protrusion or use the thumb-stud for easy SpeedSafe® opening. As with all Kershaw SpeedSafe® knives, the torsion bar holds the blade safely in the handle until the user releases it. And it won't allow the blade to fall back into the handle until the user pushes it into place. For additional safety, the Safety Tip Lock keeps the blade secure even when carried in a pocket.

For good edge retention and excellent corrosion resistance, the blade is manufactured of high-carbon 420HC stainless steel. For lighter weight, the Scallion series features colorful anodized aluminum or Polyimide® handles. All Scallions include a secure liner or frame lock to keep the blade securely in place until the user closes it and a Safety Tip Lock to keep the blade stored in the handle. For added convenience, all Scallions come with a removable pocket clip for easy carrying.

The original Scallion comes with heavily textured Polyimide® handles

durable. The process of anodizing hardens aluminum and produces a porous, oxide coating that can absorb dyes. This makes it possible to produce colored surfaces that cannot be rubbed off and are extremely scratch-resistant.

Our newest Leek is the dramatic composite-blade Leek that combines the durability and corrosion resistance of 14C28N stainless steel with the toughness and wear resistance of CPM-D2. The two steels are permanently fused together and the join is highlighted with an attractive copper accent.

But that's just the beginning. Kershaw offers eleven more styles of these popular knives—from the original Leek in pure, unadorned stainless steel to our award winning and vibrantly colored Rainbow Leek. All provide the pocket-perfect size and styling of the Leek combined with a variety of high-performance materials.

Kershaw's Leeks offer a distinctive design as well as SpeedSafe® ambidextrous manually assisted opening. With SpeedSafe®, the user can smoothly and easily deploy the blade with just one hand, either left or right. All Leeks come with a secure locking liner and a removable/reversible pocket clip for tip-up or tip-down carry. Most Leeks feature high-quality 14C28N stainless steel that hones to an incredibly sharp edge, re-sharpens easily, and strongly resists corrosion. The Random Leek and G-10 Leek use S30V premium stainless steel for additional wear resistance. The G-10 Leek's blade has a unique "stonewashed" finish that gives it an exceptionally rugged look. Some Leeks are available with a partially serrated blade.

Leeks come in a variety of handle styles, too—some with technologically advanced coatings for enhanced performance. For example, the bead-blasted stainless steel handle offers strength and beauty. The G-10 Leek has a sturdy G-10 handle for additional gripping power and dimensional stability. A handle with black Tungsten DLC (Diamond-Like Carbon) coating produces a Leek with a non-reflective surface. For light weight and a one-of-a-kind look, choose our "smoked" double-anodized aluminum finish in two colors. Or choose our new Pink Leek with its fashionable pink anodized-aluminum handle, the Rainbow Leek with its Titanium Oxide coating that produces a highly scratch resistant, brilliant, rainbow

COMPOSITE LEEK
Model 1660CB

finish. There's also the Random Leek with a modified Tanto blade for cutting power and Chromium Nitride coating for hardness and corrosion resistance.

Designed to go anywhere and do just about anything, the made-in-the-USA Leek is the ideal carrying knife—no matter which one of these our many models you choose.

SHALLOTS

The shallot onion is one of the world's favorite ways to spice up a cuisine. And the all-stainless-steel Kershaw Shallot, is destined to be your new favorite way to spice up your knife collection.

All Shallots feature our SpeedSafe® ambidextrous manually assisted opening. Just pull back on the blade protrusion with the index finger of either the left or right hand. The SpeedSafe® system then moves the blade out of the handle

ON A VARIETY OF TASKS

For this one, we've peeled away the layers, leaving nothing but superb form, keen function, and pure stainless steel. The Shallot features a Sandvik 14C28N recurve blade. The unique recurve blade design provides for low mass and high performance, while the 14C28N steel offers excellent hardness, corrosion, and wear resistance. This high-carbon chromium steel provides for a high quality blade ideal for a wide range of both everyday and extraordinary tasks. The Shallot is available with a smooth blade and a partially serrated blade.

Made in the USA

and smoothly and easily into position, ready for use.

The Shallot is a pocket-perfect 4-3/8 inches closed and weighs just 4.2 ounces. It is made in the USA and built to uphold Kershaw's high standards of quality and performance. Like the tasty shallot it's named for, the new Kershaw Shallot is sure to make your mouth water for more.

This exceptional blade is partnered with a sleek stainless-steel handle designed for a sure, ergonomic grip. The handle is built of 410 stainless steel—hardened and tempered to provide maximum strength. For safety, there's a convenient frame lock to secure the blade in position until you choose to release it. Both blade and handle are polished to a steely matte-gray finish. Or, if you prefer the dark, choose the Black Shallot, with a smooth or partially serrated blade featuring a Tungsten DLC (Diamond-Like Carbon) coating.

The big, beefy Boa was the first knife to offer knife users Kershaw's innovative, even easier way to deploy SpeedSafe® manual-assist opening. The Boa lets you pull back on a protrusion on the back of the blade with your index finger—using either the left or right hand. This short pull deploys SpeedSafe® so that the blade moves into position smoothly and locks into place. In addition, with the blade in the open position, the protrusion becomes an extended finger guard for additional safety and a secure grip. The Boa also features a thumb-stud that

The liners are heat-treated 410 stainless steel and the knife is equipped with a liner lock for safety.

Want a smaller Boa? Choose the Baby Boa with its high-polish, high-carbon Sandvik 14C28N stainless-steel blade. In addition to mirroring the lines of the larger Boa, the Baby Boa has a unique cutaway in the handle that exposes the SpeedSafe® torsion bar in order to provide a glimpse at the inner workings of the SpeedSafe® system.

The Mini Mojito is another smaller knife with the versatile recurve blade. Cool styling, SpeedSafe® manually assisted opening, and Kershaw's patented Stud-Lock® combine to give this smaller knife its kick. The Stud-Lock® offers an extremely secure locking mechanism that is easy to release when the user is ready to secure the blade in the handle for storage.

The First-and Still

can be installed on either the right or the left side—making it even easier for left and right-handers to use the knife.

This rugged knife features a durable S30V stainless-steel blade with scratch-resistant Tungsten DLC coating. A slight recurve at the base of the blade provides enhanced cutting ability by extending the cutting surface and enabling knife users to slice through rope,

The aluminum handle features Kershaw's doubled-anodized "smoking" process. The handle is actually anodized twice—once to lay down the base color; in this case, a rich red—and a second time to "smoke" the handle with black. This produces a finish that looks as if smoke had been captured and imprinted on the handle. Each handle is absolutely unique—no two are exactly alike.

cardboard, and other materials with ease. The heavy-duty handles are made of 6061-T6, anodized and textured aluminum for lighter weight and strength.

GET A GRIP

It's a fact that most knife injuries occur because of a poor grip on the knife. Kershaw's Blur solves the problem with a unique handle that features advanced materials to ensure a safe, secure grip every time—even under extreme conditions. The Blur also features incredible, multi-tasking performance, the highest quality materials, and the kind of good looks knife users will be proud to own.

Blurs (except the 1670S30V Blur) feature premium 14C28N stainless-steel blades for strength and corrosion resistance. Choose standard or partially serrated blades. For smooth, one-handed opening, all Blurs are SpeedSafe® equipped. The anodized aluminum handles are durable and lightweight. But the key to the Blur's great grip is the combination of the unique handle ergonomics and the Trac-Tec inserts

with black Trac-Tec inserts, black Tungsten DLC-coated blade, and two blade styles, standard and partially serrated. For a Tanto-style blade, choose the Tanto Blur in basic black, both handle and Tungsten DLC-coated blade.

**Made
in the USA**

And finally, the S30V Blur features a S30V stainless-steel blade with a unique "stonewashed" finish. The design is set off by a black handle and black Trac-Tec inserts. All Blurs come with a removable or reversible pocket clip so it's easy to keep close at hand. When you want a knife that offers both power and performance, you just can't beat Kershaw's versatile Blurs.

on both sides of the handle. The Blur's 6061-T6 aluminum handle not only precisely fits the user's hand for a comfortable, secure fit, but Kershaw also CNC-machines each handle to accept textured Trac-Tec inserts. The Trac-Tec inserts offer a rough, dry feeling that ensures a solid grip even in the most damp or slippery conditions.

Blurs are available in a variety of striking styles. The Black Blurs offer a black anodized aluminum handle

REALLY GOOD GRIP

TOOLS FOR RESCUE

RESCUE BLURS

Rescue Blurs are equipped with SpeedSafe® manually assisted opening so they're easy to open—even when you have only one hand free. The blades are built of premium 14C28N stainless steel for strength and high corrosion resistance. Partial serration ensures that the Rescue Blur can cut through cord, seat-belt webbing, and more. The anodized aluminum handles are durable and lightweight.

**Made
in the USA**

RESCUE BLUR
Model 1675BLKST

RESCUE BLUR
Model 1675RDST

Rescue Blurs solve two of the key problems encountered in a difficult rescue situation: a poor grip in possibly slippery conditions and operating in close quarters. The Rescue Blur solves the grip problem with a unique handle that features advanced materials to ensure a safe, secure grip every time—even under the extreme conditions of a rescue situation. It solves the 'operating in close quarters' problem with a round-tip blade for safe cutting in close or dangerous situations.

For extra traction and a secure grip, the handles are outfitted with Trac-Tec inserts. The Trac-Tec material provides a non-slip grip even in wet and slippery conditions. Rescue Blurs also feature a carbide glass-breaker tip for emergency use. A sharp blow with the carbide tip can crack windshield glass, enabling trapped accident victims to escape. In an emergency, the glass-breaker can mean the difference between life and death for trapped victims.

Whether you choose basic black or easy-to-see red, you're sure to want one or more Rescue Blurs in your emergency kit.

Weight...4.0 oz.

TOOLS FOR RESPONSE

THE KERSHAW RESPONDER

is another key tool to include in your ready-for-anything arsenal. It's designed to handle everything from extreme sports to rescue situations.

The Responder features a fixed blade with full-tang construction for strength. It also has a non-slip, double injection-molded

Santoprene® handle for a secure grip in any situation—from wet and muddy to cold and icy. The neon-yellow Responder also features a life-saving carbide glass-breaker tip built into the handle. The Responder is also available in basic black, without the glass-breaker tip.

The blade design compliments this multi-function handle. Built of AUS8A stainless steel with Black Teflon® coating, this tough blade rates 57-58 on the Rockwell hardness scale.

It is corrosion resistant, easy to re-sharpen, and takes a razor edge. The blade's cutting hook will zip through most material with ease—including line, webbing, and seat belts—but the tip is rounded for safety. The multi-function Kydex® sheath offers multiple carry options with both cord eyelets and strap slots and keeps the Responder close at hand.

With Kershaw's Responders, you'll be ready for just about anything life throws at you.

RESPONDER Model 1078YL

Steel.....AUS8A stainless-steel with black Teflon® coating

THE NEW WHIPLASH

has the kind of dramatic looks that will turn your head fast. But, believe us, this is the kind of Whiplash you want. This bold, military-style fixed-blade knife has a built-in parachute cord lanyard. Pull the tab at the butt of the knife to release the elasticized lanyard, wrap it around your wrist, and you're good to go. For an even more secure grip, the Whiplash features extra-large thumb notches and an oversized index-finger notch. For hardness and strength, the blade is 8CR14 stainless steel with matte-black PVD coating.

manually assisted opening and when to use fully manual operation. Simply flip the roll-switch on the knife's spine. The high-performance blade is Tungsten DLC-coated, Sandvik 14C28N stainless steel. Handsome, anodized-aluminum handles provide lightweight strength.

For simplicity and ultimate utility, the Military Boot Knife is a year-in, year-out favorite. The one-piece knife is drop forged from 1.4116 German stainless steel. The flat-ground blade has a distal taper and a partial false

TACTICALLY INSPIRED

Model 4355

Or you could pull the Ripcord. The Ripcord offers a patented design that provides the strength and stability of a fixed-blade knife, yet stores as compactly as a folding knife. A convenient sheath doubles as the OTF ("Out the Front") deployment system. A knob in the sheath engages or disengages the locking function. Simply grasp the handle and pull straight out of the sheath. To close the knife, just replace it in the sheath. Sandvik 14C28N stainless steel gives the blade strength, corrosion resistance, and edge retention. Tungsten DLC (Diamond-Like Carbon) coating enhances performance and looks good doing it. The sheath is MOLLE compatible.

Kershaw's Tanto Cyclone is another top tactical choice. It features an innovative "On/Off Option" that lets you control when to use SpeedSafe®

edge on top—in addition to its "shaving sharp" business edge. The finish is bead-blasted, matte gray, and non-reflective. Steel riveted POM scales provide an excellent grip. The quick-release sheath features a slim design for multiple carrying options.

GET A GRIP

on one of Kershaw's hardest working pocketknives.

NOW PINK CAN BE

It's the D.W.O. Classic, a small but mighty clip-blade knife that weighs in at less than 2 ounces and takes up just over 3 inches of space when closed.

Our newest D.W.O. is the D.W.O. Pink. And while the pink color is just plain fun, the durable co-polymer handle serves a very practical purpose. It provides a comfortable grip and non-slip control in most any outdoor condition—from desert hot and dry to monsoon wet. The lock back design makes it safe to use and is easy to release when you want to close the knife. The D.W.O. even has a built-in slot to hold a lanyard. The work-tough D.W.O. is the ideal companion for pocket, glove compartment, toolbox, or truck box.

All feature the Kershaw comfortable co-polymer handle for a secure grip and a premium AUS6A stainless steel blade for top performance.

The Kershaw D.W.O. was first introduced in 1986 in memory of Delley Wade Officer (1960-1984) who fell victim to a tragic hunting accident. A portion of the proceeds from the sale of each knife still goes to Delley's family.

Designed to dish it out and take it, the D.W.O. is so useful, you'll want more than one. They're destined to be one—or more—of your very favorite Kershaw knives.

Kershaw's Storms are ready to handle just about any task you can throw at them.

Big and bold, the Storm series offers a super-smooth feel and a grip that just won't quit. While the

Both large and medium-sized Storms are available with a standard smooth-edged blade or a partially serrated blade.

A Storm's Coming

STORM II
Model 1475GMST

Storms do not include SpeedSafe®, knife users will appreciate the Storm's butter-smooth, one-handed manual opening. The blade glides easily out of the handle as the user pushes on the thumb-stud and rotates the blade into position. Storms also can be easily "flipped" open by pulling back on the Flipper blade protrusion while rolling the wrist forward. A frame lock secures the blade in place while in use.

Storms feature a dramatic blade designed for multi-tasking and top performance. Kershaw chose Sandvik 14C28N stainless steel for the blade to ensure durability, corrosion resistance, exceptional edge retention, and easy re-sharpening. For extra strength and cutting power, the blades are flat ground to Kershaw's famous, "shaving sharp" edge.

The Storm series features quality, heat-treated 410 steel handles with black Trac-Tec inserts. The inserts, along with Kershaw's unique handle ergonomics, ensure a super-secure grip. Kershaw CNC-machines each handle to accept these textured inserts.

The inserts offer a rough, dry feeling that ensures a solid grip even in the most damp or slippery conditions. All made-in-the-USA Storms also come complete with a reversible/removable belt clip.

In addition to the two blade styles and sizes of the Storm, Kershaw also offers the Rodeo Storm. It's the blade used by professional Bull-Riding Champion,

Guilherme Marchi, and has been emblazoned with his signature and a silhouette of Guilherme riding a bull. The Rodeo Storm is the larger 4-3/4 inch Storm and comes with the partially serrated blade—perfect for all the tasks Guilherme has to take care of—whether in the rodeo or back at the ranch.

BLACK VAPOR II
Model 1650BLK

With its “drilled” industrial design, the Vapor combines high-tech good looks with super-smooth, one-handed, manual opening. We designed the Vapor to provide knife users with advanced style at a value price.

Vapors are precision engineered for smooth, easy blade travel. The Vapor blade glides easily out of the handle as the user pushes on the unique, conical-stepped thumb-stud and rotates the blade into position. When the blade is open, a portion of the frame moves behind the blade to lock it securely in place. Premium

The Black Vapor gives you the same great style, but in classic black. Both blade and handle are coated with Titanium Carbo-Nitride for enhanced hardness, as well as pure good looks.

Like a fresh, spray-laden breeze from a waterfall, the Vapor blows in to vaporize the boring or ordinary in carrying knives. The Vapor offers terrific looks and precision performance in an everyday carrying knife that still has plenty of flair.

AUS 6A stainless blade steel provides an excellent balance of toughness, edge sharpness, and corrosion resistance. For extra strength, the blade is flat ground to Kershaw's famous, “shaving sharp” edge.

But it's the open handle that gives the Vapor its distinctive look. For all-purpose strength, the handle is built of heat-treated 410 stainless steel. Then it's drilled with a series of precision holes along the entire length of the handle. The holes provide the user with a glimpse of the inner mechanical workings of the Vapor—and at the same time, enhance its strong, yet airy look.

The Vapor offers two handsome finishes. For a classic look, choose the pure stainless steel Vapor—in two sizes and with straight or partially serrated blades.

Classic Knives

If your taste runs toward cold steel and warm hardwoods, you'll appreciate this collection of classic Kershaw knives.

The Shotgun Shell knife is a perennial Kershaw favorite. It features two stainless-steel blades: a classic clip-point blade that provides a sharp point and excellent blade control, and a handy file blade with flat screwdriver tip. The handsome rosewood handle is accented with a brass "shotgun shell" cap and brass liners.

The Double Cross and Double Duty also feature multiple blades and are versatile, yet compact, tools. The Double Cross offers both a clip-point and a sheepfoot blade and thumb-studs for one-handed opening. The larger Double Duty features a clip-point and a spay blade. Both models have polished nickel bolsters with handsome stamina-wood scales. For safe operation, both feature a unique single liner that locks both blades.

For classic folders with a refined look, choose the Whiskey Gap and the Wild Turkey. These single-blade pocketknives feature AUS8A stainless-steel blades that earn a 58-59 on the Rockwell hardness scale. Brass liners, satin-finished bolsters, and rosewood inlays in the handles put the finishing touches on these classy gentlemen's knives.

Here's a suit-worthy collection of stylish pocketknives and tools.

Kershaw packs a lot of convenient function into our Money Clip and Key Chain multi-function tools. Both include a small knife blade, a nail file, and mini-scissors. And both Money Clip and Key Chain are built of AUS6A stainless steel with genuine rosewood inlays. The Money Clip, of course, features a secure money clip on the back, while the Key Chain offers a secure, double key ring. Closed, the Money Clip and Key chain are a compact 2 inches long and weigh in at just over an ounce each.

For a smaller gentleman's pocketknife, Kershaw's LFK is an excellent choice. It offers anodized 6061-T6 aircraft-aluminum handles and a compact blade of AUS6A high-carbon stainless steel, which provides wear resistance as well as excellent toughness.

Steel and rosewood combine again in the Squaw Creek and Indian Ford folding knives. The Squaw Creek is the more compact of the two. Closed, it's just 2-5/8 inches in length.

The clip-point blade is made of AUS6A high-carbon stainless steel, offering excellent toughness and wear resistance. The handle is made of the same high-quality stainless steel, polished to a satin finish and accented with genuine rosewood inlays. The Indian Ford is the larger version and folds to a 3-1/2 inch, pocket-sized length. Of course, it has the same quality construction and good looks of its smaller cousin.

*T*here are some very good reasons why Kershaw's Silver Spur and Stainless knives are still among our most popular: great looks, great performance, and great value.

The Silver Spur comes in two perfect carrying sizes. Closed, the smaller Silver Spur is just 2-1/2 inches long, while the larger one is 3 inches in length. Both have blades built of AUS6A high-carbon stainless steel for toughness and wear resistance. But another feature that

Personalization from Kershaw

Kershaw can etch your name or laser-etch your company logo on the handles of knives like the Stainless Steel or on the blade of any un-coated Kershaw knife for a very small fee. Just send us the knife and tell us how you'd like it personalized. Can't wait? You should be able to find local engravers who will be happy to personalize your Kershaw.

EVEN URBAN COWBOYS

makes the Silver Spur a good choice for pocket carry is the lightweight aluminum handle. The handle is embossed with the Kershaw logo and ribbed for a secure grip. For added convenience, each handle is drilled to accept a lanyard or keyring.

For pocketknives that are just plain good-looking, choose the Kershaw Stainless models. Like the Silver Spur, they come in two sizes ideal for pocket carry. They feature 420J2 stainless-steel blades for toughness, high stain resistance, as well as excellent value. The super-slim handle is smooth and flat, making it lightweight, easy to carry, and providing an ideal surface for personalization, if desired.

Deliver Big Performance

That's why you'll like the award-winning Kershaw Carabiner Tool's new little brother—the Mini Biner. In addition to its lightweight and durable aircraft-aluminum construction, the Mini Biner features a brilliantly sharp Kershaw blade built right in. This high-carbon 420J2 stainless-steel blade is designed to provide extended use without re-sharpening. You'll also

like the ergonomic "contoured carabiner" design that makes this mini tool as comfortable to use as it is handy. The spring-loaded carabiner closure attaches the tool to vest, backpack, hydro-pack, keyring, or belt loop with ease. Like its big brother, the Mini

The TwoCan is two tools in one. It's a combination knife and scissors tool featuring a pair of blades that can be used separately or together. Open one blade and the tool can be used as you would any pocketknife. Take a slice out of that apple—or open that pile of mail. But when you need a pair of scissors, open the TwoCan's other blade. It's designed so that you can easily operate the scissors simply by pressing the two blades together between thumb and forefinger. The TwoCan features Kershaw's quality construction, too. The blades are tough 420J2 stainless steel and fold into stainless steel or anodized-aluminum handles.

Biner is available in scratch-resistant black, silver, ruby red, and sapphire blue.

But what about those times when you need two blades—when what you really need is a pair of scissors? Not a problem when what's in your pocket is the uniquely versatile TwoCan.

WHETHER YOU'RE SKI RACING

*Blade Magazine recognized
the Carabiner Tool as the 2004
Most Innovative Import Knife
of the Year.*

OR TOURING THE BACK COUNTRY,

**you want a tool that's
ready for adventure**

This handy tool has been to the ends of the earth and back in the hands of explorers, conservationists, and scientists. Kershaw's award-winning Carabiner Tool, designed by Launce Barber, is sturdy, versatile, and designed to be ready for just about any adventure. This patented, five-in-one tool includes a partially serrated knife blade, a standard screwdriver, a Phillips-head screwdriver, a bottle opener, and a spring-loaded, locking carabiner clip.

Designed to handle a full range of cutting tasks, the Carabiner Tool features a handy knife blade in high-carbon AUS6A stainless steel. The premium steel is designed to hold the Kershaw "shaving sharp" edge longer and provide extended use without re-sharpening. The blade's partial serration provides two cutting surfaces: a straight blade for general use and a serrated blade for tough jobs like cutting through rope or small branches. The blade is easy to open, even one-handed, using the oval opening in the blade. A locking liner secures the blade in the open position so there's no danger of injury through accidental closure.

CARABINER TOOL
Model 1004NB

The Carabiner Tool features lightweight, but durable aircraft aluminum handles making the tool convenient to carry. In addition, the ergonomic "contoured carabiner" design makes the tool extremely comfortable to use, too. For scratch resistant good looks, the handle is coated in Teflon® and offered in four handsome colors. Choose classic black or silver, or easy-to-see ruby red or sapphire blue.

the carabiner closure attaches the tool to a vest, backpack, hydropack, or belt loop with ease—so it's always handy when you need it. The locking, spring-loaded gate holds the tool securely closed until you pull back the gate, releasing the design, the Kershaw Carabiner Tool is incredibly easy to take with you. If you're into outdoor activities, but want something other than the traditional sheathed knife attached to your belt, the Carabiner Tool is the tool for you.

CARABINER TOOL Model 1004BL

In original matte black or über-cool urban camo, the E.T. is an impressive knife. And no, E.T. does not stand for "extraterrestrial;" it stands for External Toggle—Kershaw's high performance technology for securing a blade. This unique technology, along with the knife's wild styling, led Blade Magazine to select the E.T. as the Most Innovative

It's paired with a handsome Tungsten DLC, matte-black coating on the precision blade.

If you want a standout knife that will cause comment every time you take it out, don't miss the made-in-the-USA E.T.

The External Toggle (E.T.)

AWARD-WINNING TECHNOLOGY.

American Made Knife of 2005. The External Toggle enables the user to open or close the blade with one hand, either right or left. With just a little practice it is super-fast and incredibly easy to use. And for extreme blade security, just fold the blade in, engage the E.T. safety, and the blade is completely secure no matter how or where you carry it. To take advantage of this fact, the E.T. also has a built-in carabiner function that enables you to clip it to a belt loop or D-ring so the knife is always handy, yet always with the confidence that the blade can never accidentally be deployed.

The Sandvik 14C28N stainless-steel blade provides durability, corrosion resistance, and edge retention. The 6061-T6 anodized aluminum handle makes the knife lightweight and easy to carry. And just because you never know when you're going to need one, the E.T. also includes a convenient bottle opener. Choose from two dramatic looks to suit your style. The classic matte black handle is paired with a good-looking bead-blasted blade. The Urban Camo E.T. features a gray and black paint-spatter design on the unique E.T. handle.

Extreme security is the idea behind the E.T. This patent-pending design enables you to open and close the knife one-handed with a simple press on the toggle. To deploy the blade, hold the knife blade side up with your thumb on the toggle. Press the toggle down to release the blade and release it to let the blade move into position and lock. To close the knife, hold the knife blade side up, press down on the toggle as the blade moves into position. To secure the blade in the closed position, engage the lock and the blade simply cannot be accidentally deployed.

E.T. Model 1900

Kershaw offers high-quality knives for a wide variety of water sports—from diving, rafting, and kayaking to fishing, boating, and more. After all, a knife is more than just a handy tool. Sometimes, a good knife can literally save your life, helping you cut your way out of entangled fishing lines, ropes, nets, or other obstructions.

Kershaw's water sport knives feature sturdy stainless-steel construction, yet without unnecessary weight. Both Sea Hunter models offer precision blades of highly corrosion-resistant 420J2 stainless steel. Big, easy-to-grasp injection-molded handles feature a co-polymer overlay for a super-secure grip. The handles also have built-in "neon" accents so they're always easy to see in a marine environment. Sea Hunter blades are partially serrated—because you never know when sawing

SEA HUNTER Model 1008

A co-polymer insert in the handle assures an excellent grip. The Amphibian blade is sharpened on both sides—one side offers a standard edge, the other a partially serrated edge.

Both Sea Hunters and the Amphibian come complete with the Kershaw Diver's Sheath. The durable Kydex® sheath has a press-n-pull mechanism that secures the knife regardless of your position in the water. Depth-compensating leg straps have adjustable quick-release buckles.

With their quality Kershaw construction and thoughtful design, you can rely on the Sea Hunters and the Amphibian for extreme performance when it really counts.

your way out of a situation may be necessary. Kershaw Sea Hunters also include a cord notch for fast and powerful cutting through a variety of cord materials. The 1008BL-P Sea Hunter has a blunt blade for additional safety in close quarters. The blunt tip makes a handy tool for adjusting your gauges, too.

The Amphibian provides all the strength of solid, corrosion-resistant 420J2 stainless steel from tip to pommel, but with a skeleton handle design to reduce weight.

AMPHIBIAN Model 1006K

Steel.....420J2 stainless-steel
Handle...420J2 stainless-steel full-tang skeleton with black co-polymer insert
Blade.....3-3/4 in. (9.5 cm) double-edged and partially serrated
Overall...7-3/4 in. (19.7 cm)

FILLET

Fortunately, Kershaw has exactly the right fillet knife to make your fish grill-ready. From our compact Folding Fillet to our Electric Fillet that lets you power through even the biggest catch, Kershaw offers a range of convenient filleting knives. All Kershaw fillet knives feature stainless-steel blades that provide the ideal degree of flex for fast and easy filleting. This softer steel enables the blade to bend

KNIFE

without breaking so that it moves easily through the body of the fish to give you the ideal fillet.

The newest member of the perfect-fillet family is the 7-1/2-inch Fillet Knife. In addition to its flexible fillet blade, it features a secure-grip contoured handle and comes with its own ABS sheath for carrying and storage—and at a value price.

Or choose one of our fixed-blade fillet knives with sure-grip co-polymer handles—in 6, 7, or 9-inch lengths. For the ultimate in versatility, choose our 7-Step Fillet Knife, which adjusts from 5 1/2 to 9 inches. Its injection-molded handle is contoured for a secure grip, even in slippery conditions. And for compact filleting, select the 6-inch Folding Fillet Knife with its folding spoon.

FUNCTION

CLASSIC KERSHAW STYLING

For classic Kershaw styling—ergonomic handle shape, multi-functional blade, and of course, the patented SpeedSafe® manual-assisted opening system—don't miss this series of popular knives.

These are some of the first of Kershaw's SpeedSafe® knives and still among the best. In fact, when it first came out, the classic Blackout was recognized as a Blade Magazine Best Buy. And it still is—along with its siblings, the Whirlwind and the Avalanche.

Both Blackout and Whirlwind feature 14C28N stainless-steel blades for strength and excellent corrosion resistance. The Blackout's blade is also coated with scratch-resistant Tungsten DLC for a handsome, non-reflective surface. Choose the standard, smooth blade edge or a partially serrated blade for even more cutting versatility. For a comfortable and stable grip, both Blackout and Whirlwind models have an extremely durable, contoured handle of Polyimide®. Stainless-steel locking liners maintain the blade in a safe and secure position and enhance the overall handle strength.

The Avalanche features cool function and tactical styling. Naturally, it also includes patented SpeedSafe® manually assisted opening for easy, one-handed deployment. The Avalanche boasts a premium-quality S30V drop-point blade that provides cutting power and control. In addition, the blades are Tungsten DLC coated for increased blade durability and corrosion resistance. The handsome coating also gives the blades an attractive matte-black, scratch-resistant finish.

For a super-secure grip, Kershaw's Avalanche features an aggressively textured G-10 handle. The G-10's high tensile strength makes it virtually unbreakable. G-10 also offers excellent thermal insulating qualities and performs well even in high humidity. A secure liner lock keeps the blade safely in place. For easy carrying, both Avalanche models include a stainless-steel pocket clip that can be adjusted for tip up or tip down carry.

Whether you choose the original Whirlwind, the handsome Blackout, or the G-10 Avalanche, with one of these classic SpeedSafe® knives in your collection, you've always got a tool that works like a champ.

Our popular Whirlwind, Black Horse II, Scallion, and Echo have put on their hunting gear. With camouflage handles of genuine RealTree® Hardwoods HD, they're ready to help you have a wild time.

For a larger knife that's fully equipped with SpeedSafe®, choose the Camo Whirlwind

with its strong, corrosion-resistant 14C28N stainless-steel blade. The contoured and camouflaged Polyimide® handle provides an extremely secure grip. Stainless-steel locking liners maintain the blade in a safe and secure position as well as enhancing the overall handle strength.

The smaller Camo Scallion is the ideal knife for general around-the-campsite chores. It offers high-performance styling plus the convenience of SpeedSafe® manual-assist opening. Just pull back on the blade protrusion or use the thumb-stud for easy ambidextrous opening. For additional safety, the Safety Tip Lock keeps the blade secure. The blade is made of high-carbon 420HC stainless steel for good edge retention and excellent corrosion resistance. The knife comes complete with a removable pocket clip for carrying options.

The Camo Black Horse II features a sturdy, high-carbon, 440A stainless-steel blade—the toughest of the high chromium cutlery grades of steel. Its clip-point blade configuration tackles a variety of tasks and is ideal for cutting in close quarters.

The durable, co-polymer handle, in RealTree® camo, is finger contoured for a secure grip no matter the environment. The ergonomic handle design makes repetitive tasks—such as skinning—easier and less fatiguing.

The Echo combines 3-D contoured scales with a powerful drop-point blade of durable AUS8A stainless steel. The Echo's handle is all-weather, molded Polyimide®, contoured for an extremely comfortable, secure grip. This unique shape means using the knife is less fatiguing—even when in use for long periods of time. The handle is drilled to accept a lanyard and the Echo comes with its own camouflaged laminated-leather sheath that secures easily to your belt.

CAMO BLACK HORSE II Model 1060ART

Steel.....440A stainless-steel

Model 1070C

For a hunting companion you can count on, pack Kershaw's classic Folding Field or fixed-blade Deer Hunter. Both feature splendid drop-point blades of high-carbon, durable AUS8A stainless steel honed to a "shaving sharp" edge. The design is highly controllable and enables the hunter to accomplish field-dressing tasks without fear of nicking an organ. The knife's deep belly offers plenty of slicing and skinning power, while the strong point retains great strength.

Both Folding Field and Deer Hunter offer gleaming brass bolsters, pommel, and rivets. And they're completed with a hand-contoured Phenolic® handle for comfort as well as extreme durability, excellent strength, and dimensional stability, even in wet, outdoor conditions. Both knives come complete with a harness-leather sheath to protect your blade—and your gear.

These are quite simply among the finest hunting knives you can own—and some of our most time-consuming to manufacture. You will be extremely proud to use them on your very next hunting expedition.

DEER HUNTER Model 1030

Steel.....AUS8A stainless-steel
Handle...Phenolic & brass
Blade.....4 in. (10.3 cm)

ZIPIT
Model 2520

Whatever your hunting style or taste, Kershaw has a blade that'll meet your needs.

For hunters with a taste for what's new, there's our Zipit gut hook. Super compact and easy-to-use, the Zipit will help you zip through your field dressing chores. With no exposed sharp edges and a ridged finger hole for a good grip, it's super secure, too.

For simple, yet durable hunting knives, many hunters choose the Antelope Hunter II and the Bear Hunter II. Both fixed-blade knives feature blades of tough AUS8A stainless steel that's been rated 56-58 on the Rockwell scale. This premium steel is designed to hold an edge longer, providing extended use without re-sharpening—

ROUGHNECK Model 1010

Steel.....AUS6A stainless-steel
Handle...Black injection-molded co-polymer with red accent
Blade.....6-1/4 in. (15.8 cm) partially serrated spine
Overall...11-1/8 in. (28.3 cm)
Weight...6.3 oz.
Includes harness-leather sheath

MAKE EVERY HUNTING TRIP THE TRIP OF A LIFETIME

even under heavy field use. The co-polymer handles provide a sure grip—even in wet, outdoor conditions. Both the Antelope Hunter II and Bear Hunter II fit nicely into their own belt sheaths to protect both blade and gear.

For a sturdy hunting knife that offers great performance at a value price, check out the Roughneck. The Roughneck's full-tang blade is made of durable, high-carbon AUS6A stainless steel. The full-tang construction and double-injection-molded handle offers extra strength and superior grip in wet conditions so it's the ideal tool for field dressing.

All Kershaw hunting knives and tools are designed for field-tough performance and value.

ANTELOPE HUNTER II Model 1028

Finger Hole.....Black rubber insert
Blade.....1/2 in. (1.3 cm)
Overall...3-3/4 in. (9.5 cm)
Weight...1.6 oz.

Every hunter has to be able to count on his hunting companions. And the Antelope Hunter II—now in brilliant safety orange—is the newest in a long line of reliable hunting buddies

Two of Our Top Hunting Tools

available from Kershaw. The orange-handled Antelope Hunter II features a broad hunting blade of tough AUS8A stainless steel. Its co-polymer handle is designed for a sure grip, and the new hunting-orange color makes it easy to keep track of the knife in the field. It comes with its own belt sheath to protect the blade—and your gear.

If your favorite hunting knife isn't equipped with a gut hook, we've got the answer. It's the Zipit Gut Hook—also in safety orange. This is a razor-sharp, high-performance gut hook, yet it measures only a few inches in length and weighs just 2 ounces. The trick is that the Zipit is just the gut hook—with a built-in finger hole instead of a knife-style handle. Just hook your index finger through the Zipit's safety-orange rubberized finger ring and zip through field-dressing chores.

The Elk Skinner II offers a full-tang blade of high-carbon AUS6A stainless steel and an angled gut-hook design. The double-injection-molded handle offers extra strength and superior grip and the hook's angled construction provides extra room for your hand.

Hunters who prefer folding hunting knives can rely on our rugged and lightweight Northside Hunters. Both the hunting folder and hunting folder with gut hook feature AUS8A stainless-steel blades for toughness and corrosion resistance. The blade design ensures that field dressing is a faster and easier task.

The injection-molded handles have an ergonomic design that provides a superior grip in most any conditions. No matter the task, they won't let you down. A sturdy nylon belt sheath is included.

ANTELOPE HUNTER II Model 10280R

Steel.....AUS8A stainless-steel

A collection of hunting knives and a zip tie are arranged on a camouflage-patterned cloth laid over a snowy ground. In the background, a rifle with a scope is visible. The knives include a large fixed-blade knife with a tan handle, two folding knives with green handles, and a folding knife with an orange handle. A white zip tie with an orange ring is also present. An orange banner with white text is positioned in the upper right.

COLLECTION OF WORK KNIVES

Kershaw's reputation for manufacturing high quality, hardworking knives was born in the West, where the knife is a simple, yet vital tool for handling a wide range of tasks and a cowboy wants a tool he can depend on—come wind, rain, mud, or flood.

Kershaw's Officer Ranch knives were designed to be just such a dependable tool, everyday and under any conditions.

Officer Ranch knives are sturdy work knives, pure and simple. The handle is stainless steel for strength. In addition, the handles are inlaid with cross-grooved ABS polymer for a secure grip under a wide variety of environmental conditions. The 8CR13MOV stainless-steel blades offer a good balance of toughness, edge sharpness, and corrosion resistance. The lock back design keeps the blade securely in place when deployed. The knives are drilled to accept a lanyard so your blade is always close at hand when you need it.

Kershaw also offers the Black Horse II and the Black Colt II work knives.

These are some of our most popular knives—and there are lots of good reasons why. Both Black Horse II and Black Colt II feature a sturdy, high-carbon, 440A stainless-steel blade—the toughest of the high chromium cutlery grades of steel.

The clip-point blade configuration tackles a variety of tasks and is ideal for cutting in close quarters. Honed to Kershaw's famous "shaving sharp" edge, these blades are ready to take on most any job. The durable, co-polymer handle is finger contoured for a secure grip no matter the environment. What's more, the ergonomic handle design makes repetitive tasks easier and less fatiguing. The full-sized Black Horse II provides the cutting power you want without

unnecessary additional weight, while the smaller Black Colt II offers the same power in a compact package. The lock back design of both knives provides safety, but releases easily for secure storage.

Whichever style you choose, when you want a knife that's ranch-tough and ranch-dependable, the right choice is always Kershaw.

BLACK COLT II Model 1045A

With the right tools, every campsite runs more efficiently—

MAKE

and more comfortably.

Kershaw's collection of handy camp tools help you start a fire, chop kindling, saw through branches, and more. You won't want to be without them the next time you head for the great outdoors.

Our sturdy Camp Axe is drop forged in a single piece for reliable durability. Drop forging aligns and stretches the metal's grain structure for improved strength. For a secure grip, we added a non-slip Krayton® handle and a handy sheath to protect the blade.

For clearing brush and small chopping tasks, choose the Outcast Bush Knife with its 10-inch blade. The broad blade is made of D-2 tool steel.

With its higher chrome content, this steel is sometimes known as "semi-stainless." It offers excellent wear resistance as well as the toughness required

BETTER CAMPS

in a tool designed for

repetitive chopping and slashing chores. Black Teflon® blade coating offers protection and boosts the blade's stain resistance. A textured Santoprene® handle ensures a comfortable and secure grip, while a Kydex® sheath protects the blade during storage.

Kershaw's Fire Starter always strikes a spark—even in damp conditions. A molded plastic handle makes it easy to use and a nylon cord keeps it handy when you need it.

Our Trout & Bird Set includes a multi-purpose knife with premium-quality AUS6A stainless-steel blade. The fixed-blade knife offers partial serration to enable easy dressing of fish and game. The co-polymer handle provides a secure grip, even in wet or other extreme environmental conditions. The set also includes a pair of Sportsman's Shears and a harness-leather sheath to contain them both.

Use the Kershaw Folding Saw to cut through bone and wood with this compact tool. The blade releases quickly and locks securely with the press of a button. The Swedish saw-steel blade is coated for stain resistance and designed to function on both the push and the pull stroke. When the task is done, the blade folds compactly into a secure-grip Santoprene® handle.

In addition to handling a wide variety of cutting tasks, Kershaw's

multi-purpose Sportsman's Shears include a nutcracker, a jar opener, bone notch, lid lifter, and screwdriver tips. For easy cleaning, the blades fully separate.

Choose them with or without harness-leather sheath.

BLADE TRADERS— MORE TOOLS IN LESS

How can you take more tools with you, but have them take up less space in your tent or rig? That's the beauty of the Blade Trader concept. You see, Kershaw's Blade Trader technology provides the convenience of multiple, interchangeable blades and tools, but with a single handle. There's no need to carry the whole tool, when it's just the business end you want.

With the Blade Trader's exclusive Quik-Lock mechanism, you can quickly, easily, and safely trade blades and tools—in seconds. The quality steel used to make each blade or tool is matched to its specific application. And like the premium-quality blades themselves, each Blade Trader handle is engineered with attention to function and form. Even after years of constant use, the patented Quik-Lock mechanism will securely hold each blade or tool in place. To make the job more comfortable, the non-slip Blade Trader handle is ergonomically designed to reduce hand fatigue. And all Blade Traders also include a handy storage system.

There are six different Blade Trader sets in all. Hunters will appreciate the both the Alaskan Blade Trader—with skinning blade and gut hook, saw blade, and clip-point utility blade—and the Hunter's Blade

Trader with clip-point blade and saw blade. For multi-purpose sport use, choose the Sportsman's Blade Trader with clip-point, saw, and fillet blades. The Fisherman's Blade Trader includes two different lengths of fillet blades—one that's perfect for your catch. The Deluxe Blade Trader has six different cooking and all purpose

blades plus two handles, while the Camp-Tool Trader offers you a whole

kitchen's worth of quality blades and cooking tools, including spatula and stirring spoon, plus two handles for extra convenience around the camp stove. There's even a convenient cutting board included.

Whatever your favorite outdoor adventure, Kershaw's compact Blade Traders can provide the tools you need in much less precious space.

CAMP-TOOL TRADER Model 1091CT

Protect your investment in quality Kershaw folding knives and tools by keeping them sharp with any of our compact knife sharpeners.

Our newest sharpener is the Auto-Tek. Take hold of the Auto-Tek handle, push the button, and— instantly—your sharpening steel deploys and is ready to put a perfect edge on any knife. The fine, 600-grit diamond surface on the steel is ideal for sharpening and honing almost any knife. But it's the opening mechanism that will really give you a kick. Inspired by the quick action of a switchblade, a simple push up on the button automatically releases the steel from the handle, while a pull back automatically retracts it.

The glass-filled nylon handle has soft-touch over-molding for a secure grip. Toss the compact Auto-Tek into your pack or gear bag and you'll always have the tool you need to keep your knives sharp and on the job.

Another option for keeping your Kershaw knives sharp is the Ultra-Tek Sharpener. The Ultra-Tek is crafted of lightweight aluminum and coated with fine, 600-grit diamond chips. Just a few swipes across the knife blade and your blade can be quickly and easily re-sharpened.

Further protect your investment with one of our heavy-duty nylon or harness leather sheaths. All feature heavy-duty stitching and quality materials. Sheaths fit any of the Kershaw knives listed with each model.

If you have a larger knife collection, choose our zippered case for folding pocketknives or our double-zippered case with 18 padded pockets. The nylon bag is sturdy and easy to carry.

Also easy to carry is our Key Chain T-Tool. The T-Tool is great for changing the position of your pocket clip or occasionally tightening up your knife. It includes a section of Torx bits, T6 and T8, plus a Philips-head driver. Conveniently, they all store in the handle. The tip is magnetized, which makes it easier to hold onto those small parts. The T-Tool also includes a removable key chain ring.

And you'll look sharp in this selection of top-quality Kershaw logo apparel. Choose from baseball caps in four styles and colors—including our new camo and safety-orange versions. You'll love our heavy-duty, logo-embroidered polo shirt in classic, looks-good-on-everybody black. Or check out the new 100% cotton t-shirt in gray, screen-printed with the Kershaw logo in brilliant red.

LIABILITY DISCLAIMER

Kershaw Knives are intended and sold for legitimate sporting purposes only. The purchase, use, and ownership of knives are subject to a wide variety of local laws and regulations. Certain knife styles, blade designs, and blade lengths are not allowed in specific areas. In light of recent events involving national security, knives may not be permitted in government buildings or on government property (such as court houses, federal offices, national monuments, and airports), and government officials may take the position that knives are "weapons" under applicable laws. Due to the complexity and constantly changing nature of these laws and regulations, it is impossible for Kershaw Knives, to be aware of every restriction in every location in which our knives may be sold or carried. It is the responsibility of the buyer to investigate and comply with the laws and regulations that apply in his or her specific area. You, and not Kershaw Knives, are solely responsible for any claims resulting from violation of these laws and/or regulations.

Kershaw products are made in the USA, Japan, Taiwan, Mexico, Sweden and China as indicated on the product.

We reserve the right to change specifications, materials, or discontinue products at any time without notice.

LIMITED LIFETIME WARRANTY

Kershaw products are guaranteed for the lifetime of the original owner to be free of defects when received from the factory. Any product we find to be defective in its original material, construction, or workmanship will be repaired or replaced with the same item or one of equal value at no charge. (Of course, normal wear, abuse such as prying with the knife, or neglect are excluded from this non-transferable warranty.) For warranty service, please return product via UPS or insured mail. Include your name, address, telephone number, proof of purchase (sales slip), and a short explanation of the warranty service requested to the address below.

Please allow 4-6 weeks for delivery.

Kai USA Ltd. is located south of Portland, Oregon, in the city of Tualatin. Our campus overlooks the tallest mountain in Oregon, Mt. Hood. Called Wy'east by the Multnomah tribe, the snow-covered mountain rises to 11,249 feet (3,429 meters) and has 12 glaciers and six ski areas on its slopes. Mt. Hood is also part of the Mt. Hood National Forest, which includes four designated wilderness areas within its more than one million acres. We are inspired every day by having this beautiful and historic natural wonder within view of our facilities.

KERSHAW ANNOUNCES

A Steel Upgrade to Sandvik 14C28N

Kershaw Knives is pleased to announce that we are changing our steel formula in all products that previously contained Sandvik 13C26.

Kershaw worked with Sandvik Steel, one of the world's leading manufacturers of stainless steel, special alloys, and metallic and ceramic resistance materials to produce a new steel that offers key advantages over 13C26—while still providing the excellent hardenability of the 13C26 grade.

The new steel is called Sandvik 14C28N. Increased nitrogen in the formula enables it to provide both improved corrosion resistance and the ability to be hardened to a durable 58-60 on the Rockwell hardness scale. Sandvik believes that 14C28N is the overall highest performing knife steel in the world that still maintains the productivity benefit of being fine-blankable. Both Sandvik and Kershaw are proud to present this new high-quality grade of steel. We are sure our customers will appreciate its performance as much as we do.

Best of all, we are happy to be able to provide this upgraded steel to our customers at no additional cost.
