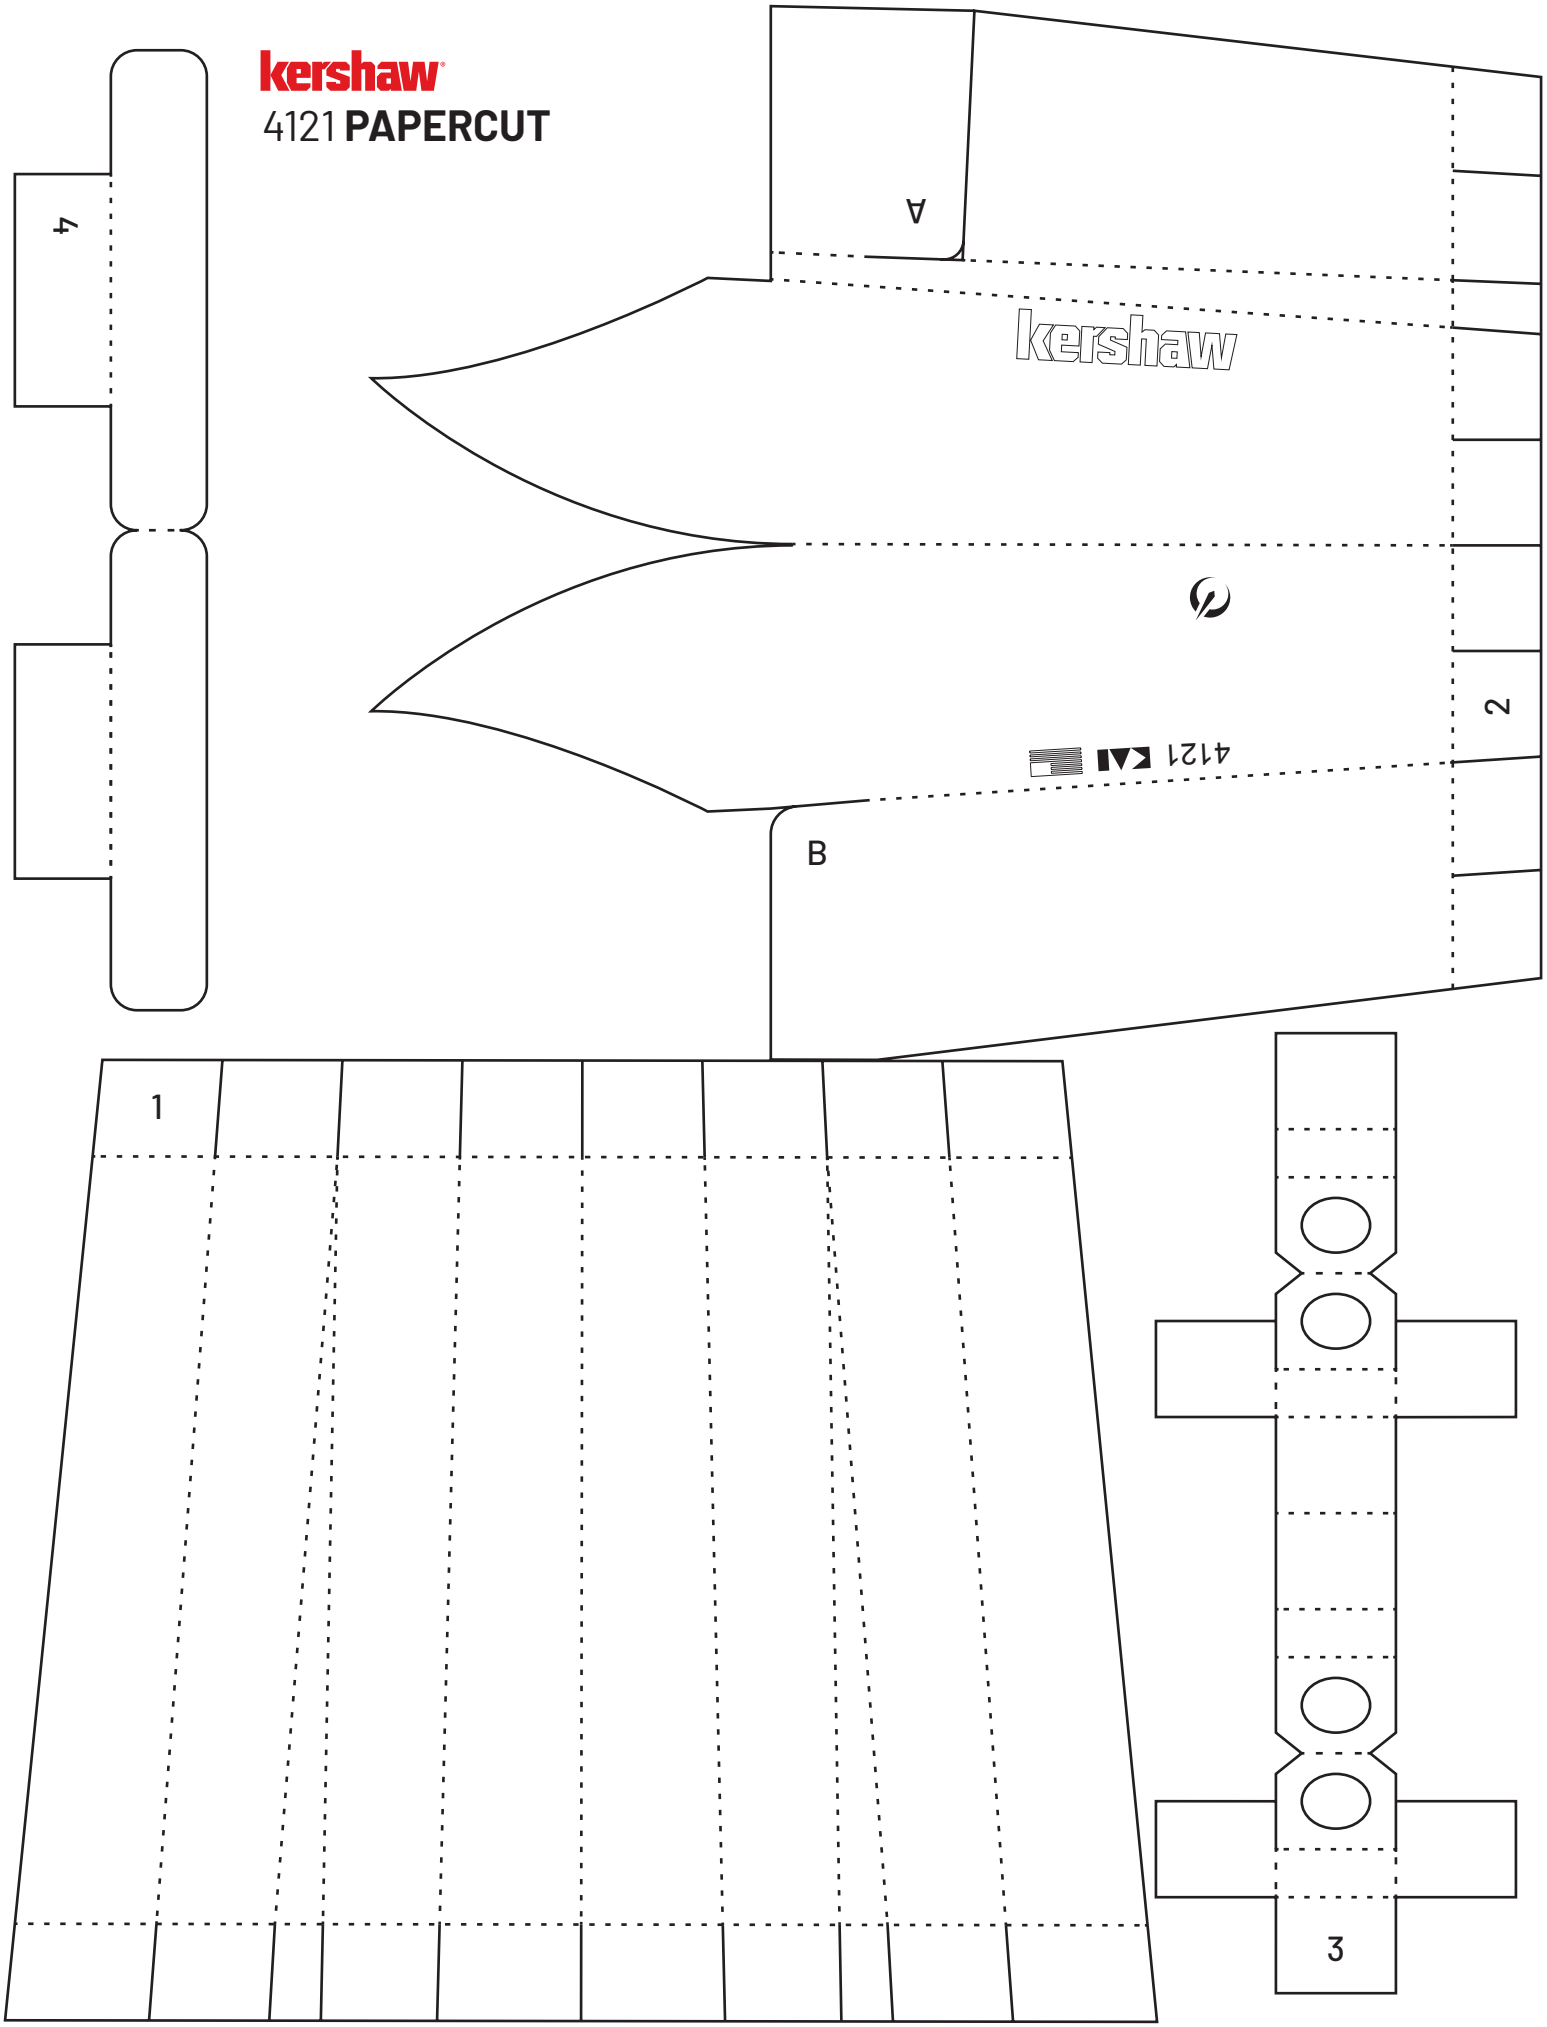
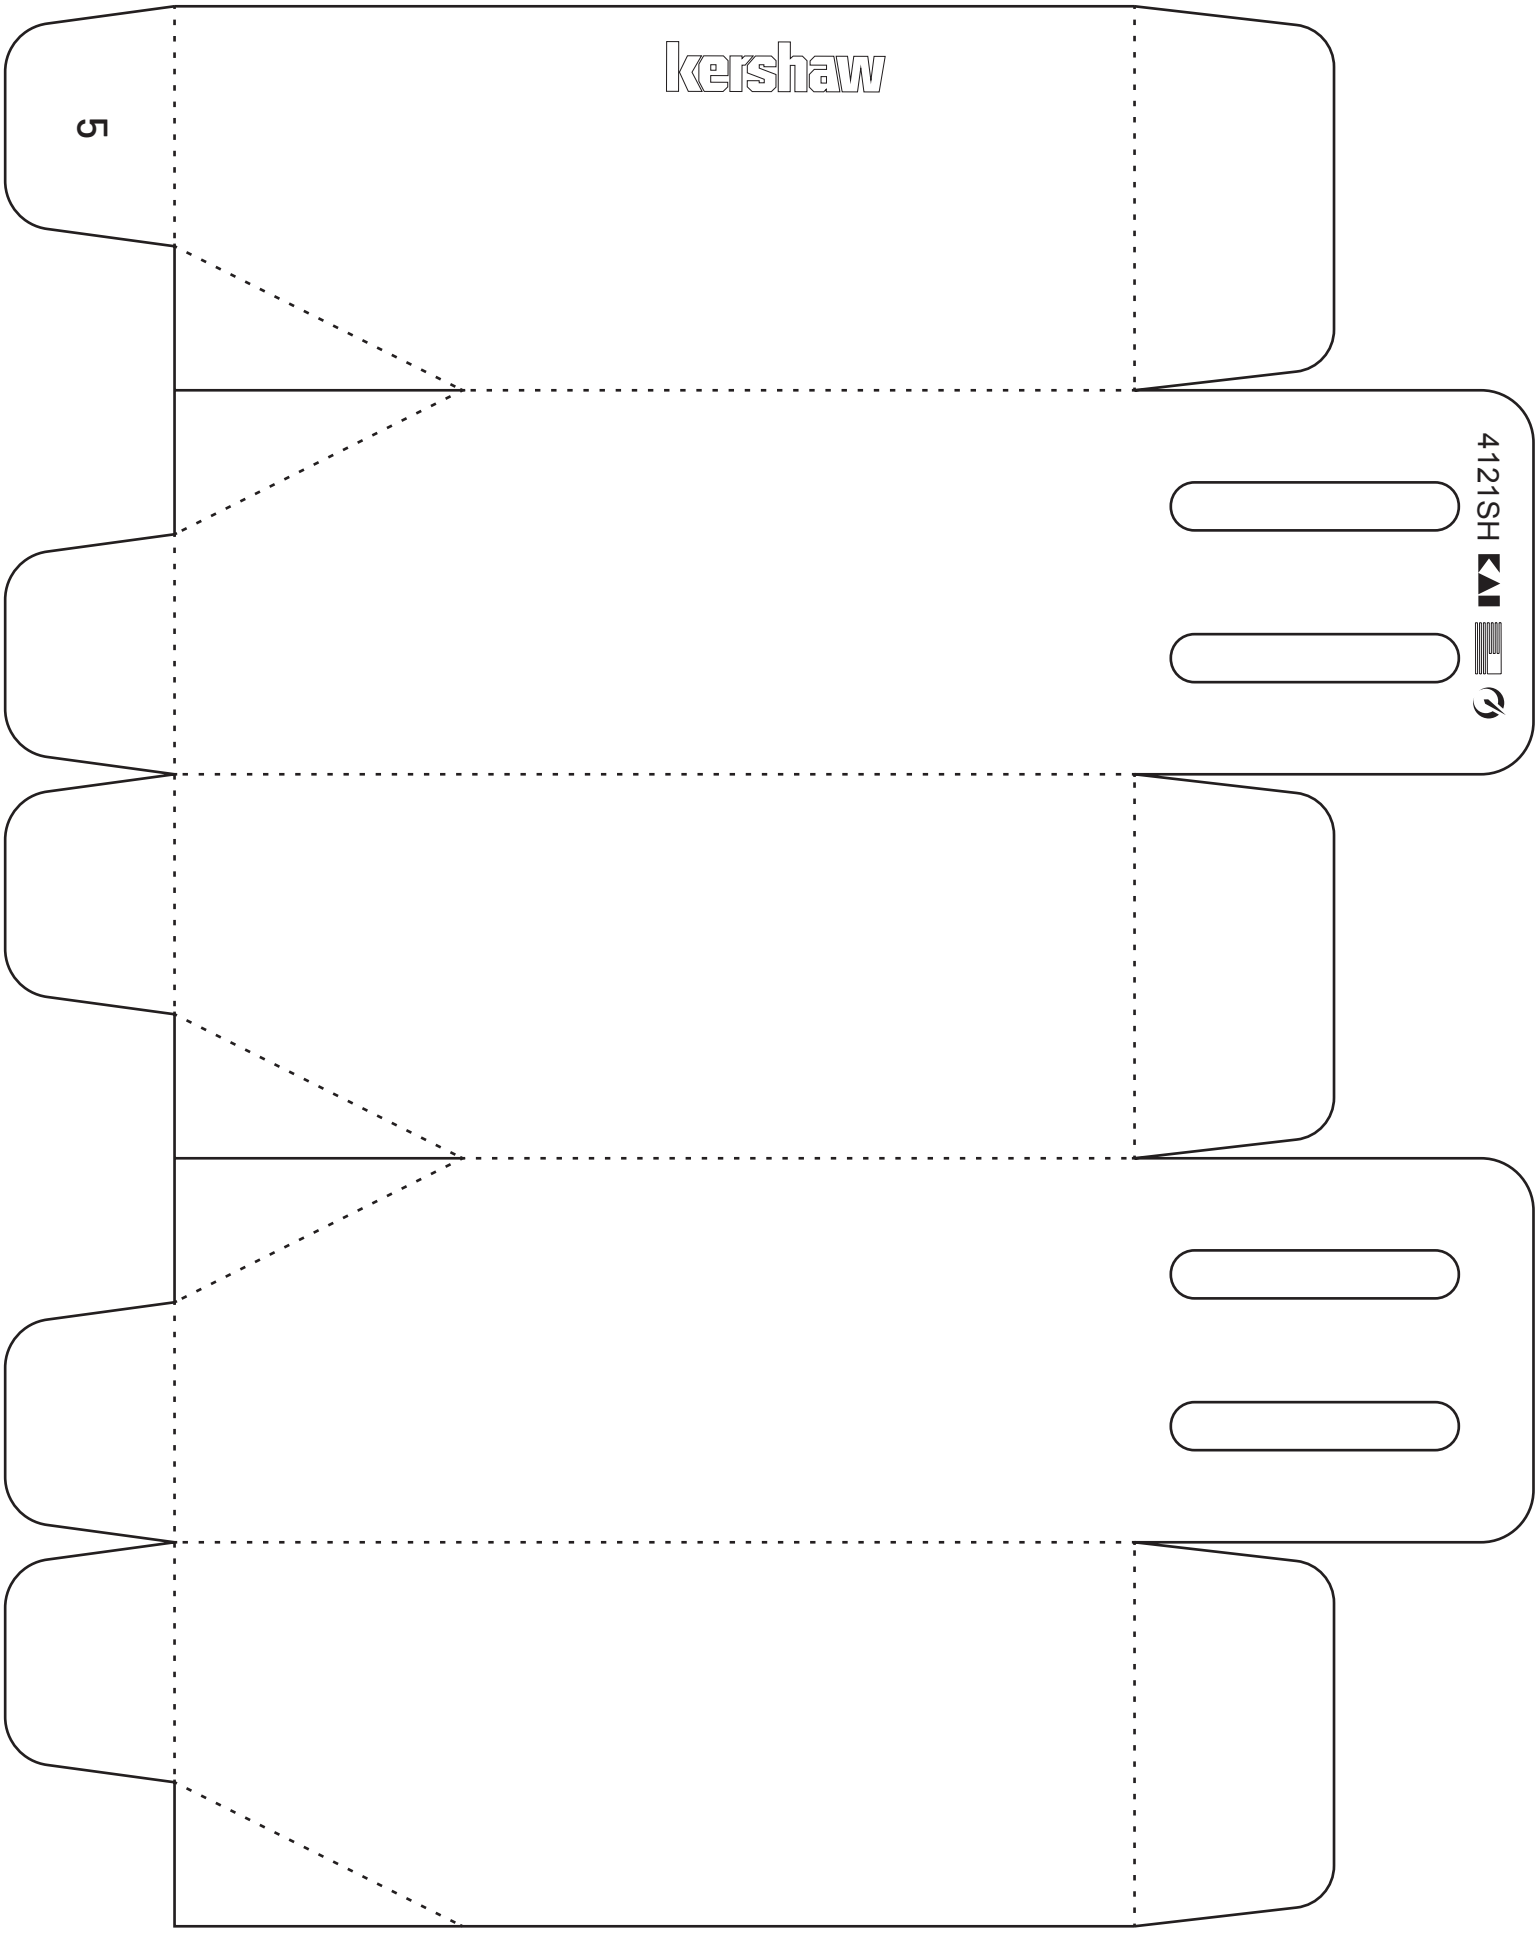
4121 PAPERCUT

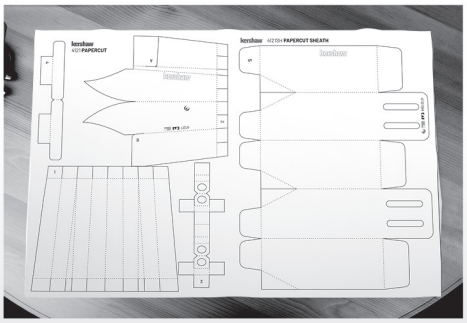


kershaw 4121SH **PAPERCUT SHEATH**

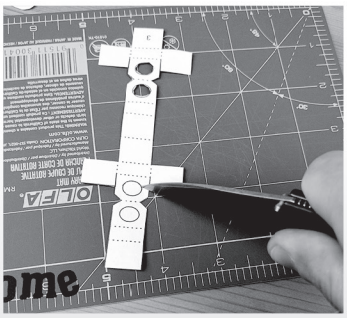


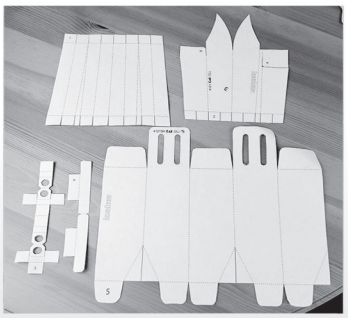
BUILD TIME: 10-20 MINUTES

STEP 1 Print PDF and gather materials



STEP 2 Cut out shapes along solid black lines

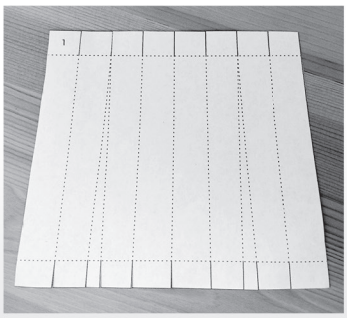


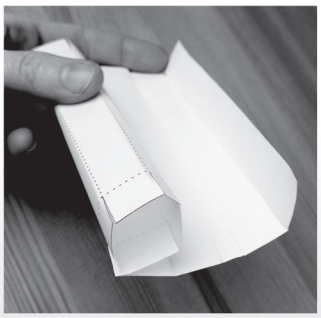


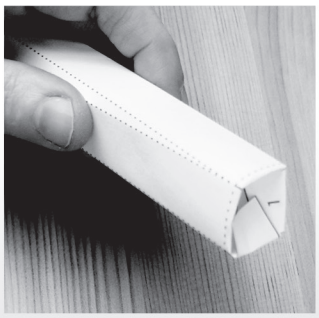
STEP 3 *Handle #1*

A. Fold the handle along the dotted lines over each other to create a tube shape with four edges on one side and five edges on the other. This should create a double walled tube.

B. Fold the tabs inside the tube to hold the shape.







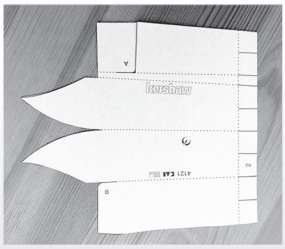
STEP 4 *Blade #2*

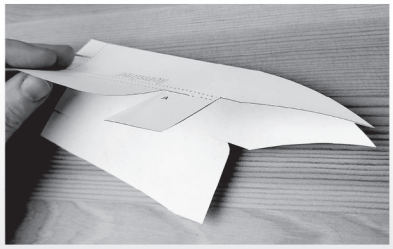
A. Fold in half along dotted line.

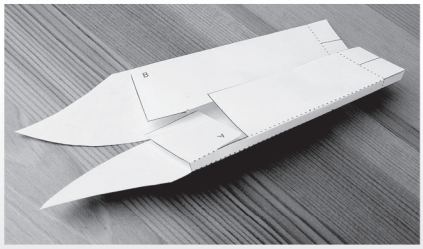
B. Fold outer flaps inside. The smaller flap A folds over and behind the opposite inner flap B. This holds the knife shape with the blade and spine exposed.

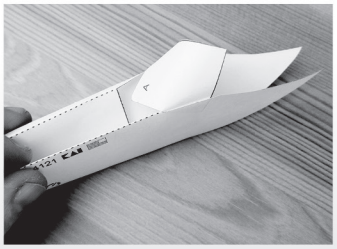
C. Fold the tabs on the end of the knife out and away from the knife.

D. Pinch the back end of the blade from the top and bottom to create a tube shape. Fit the back end of the knife into the five sided potion of the handle. The shortest edge of the handle should line up with the spine of the knife. Push the blade into the handle and pull out gently until the blade catches.









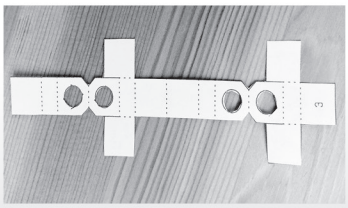
STEP 4 Cont.

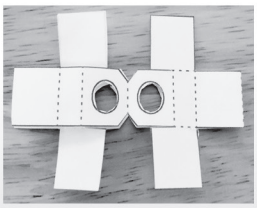
STEP 5 *End Cap #3*

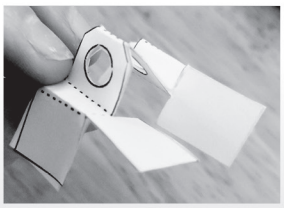
A. Fold in half along dotted lines two times so the holes line up.

B. Fold tab up along dotted line and then down along second dotted line to create a box shape. Line up sides and fold down to complete the box.

C. Gently insert the end cap into the four sided end of the handle.





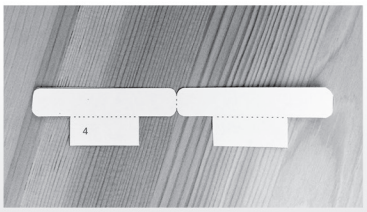


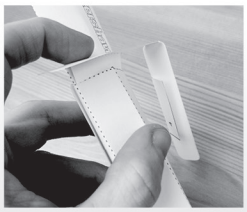
STEP 6 *Blade Guard #4*

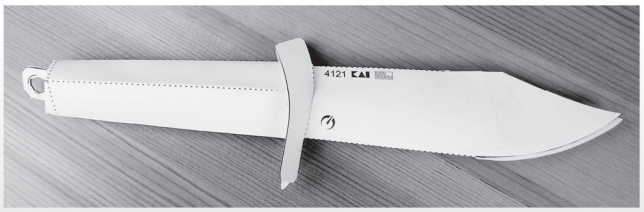
A. Fold in half along dotted line.

B. Fold tabs to the inside

C. Insert the tabs into where the blade and handle meet.

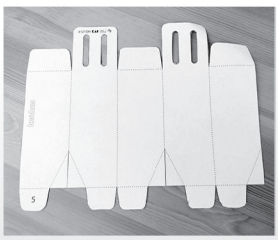


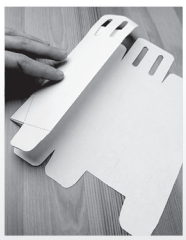


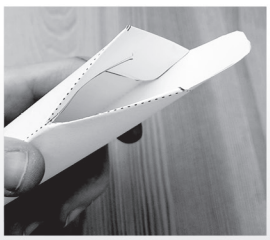


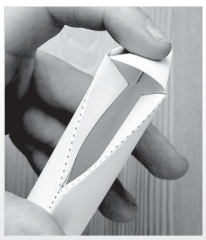
STEP 7 *Sheath #5*

A. Start at the end without the Kershaw logo and fold the sides along the folds over each other until it is flat.

B. At the top with the belt loop holes, fold the tabs over and into the sheath to hold the shape in place.








C. On the bottom of the sheath, fold one side of the rounded tabs down into the sheath. Fold the angled sides into the sheath as well. Fold the remaining tab over the angled tabs and into the sheath to create a closed end.
