

kershaw®

2 0 1 8

Kai USA, Ltd., founded as Kershaw Knives in 1974, began with one mission: to design and manufacture tools that knife users would be proud to own, carry, and use. Today, premium materials, state-of-the-art manufacturing, extremely tight tolerances, and meticulous craftsmanship ensure that each Kershaw knife or tool provides a lifetime of performance and pride of ownership. The Kershaw brand is especially known for innovative technologies and materials, resulting in numerous industry awards. We manufacture many of our products in our 55,000 sq. ft. facility located south of Portland Oregon, in the city of Tualatin. Our campus houses a state-of-the-art manufacturing facility, our design, engineering, and manufacturing teams, as well as the customer service experts who sell and support our Kershaw brand knives and tools. Kershaw products are backed with a Limited Lifetime Warranty.

AUTHORIZED DEALERS

Want to be sure the Kershaw you're carrying is the real thing? Buy from our Authorized Dealers. Specially selected by Kershaw for their ability to professionally represent and sell our products, Authorized Dealers carry genuine Kershaw quality products and service. You can be sure your purchase is fully covered under our Limited Lifetime Warranty. Find an Authorized Dealer in your area at our website:

WHAT ARE YOU CARRYING?

When you're carrying a Kershaw, you're ready. You're the one who answers when they ask, "has anybody got a knife?" You have the right tool at hand to take on tasks from the ordinary (a cardboard box) to the extraordinary (an emergency rescue).

When you're carrying a Kershaw, you're carrying quality, no matter what your budget. Kershaw manufactures a wide range of knives in a wide range of prices. From our Starter Series that offers eye-catching looks at a value price to our made-in-the-USA automatic series built from premium materials, you'll always find a Kershaw that's right for you. With Kershaw, you get award-winning technology, innovative and original design, state-of-the-art manufacturing, and genuine pride of ownership. And all backed by our famous Limited Lifetime Warranty.

There are many reasons to carry a pocketknife—from being ready for everyday life to being ready for just about anything. Whatever your reason, the name on your blade, the name you should be carrying is Kershaw.

AUTHENTIC KERSHAW

Kershaw proudly collaborates with some of the world's best custom knife designers. And our own in-house team is pretty amazing, too. In fact, our in-house designs are award-winning, fan-winning, customer-winning originals. Is it the style? Is it the engineering? Is it the ever-so-satisfying function? Yes, yes, and yes. Just look for this designation—a KERSHAW ORIGINALS design—to get in on these winning designs yourself.

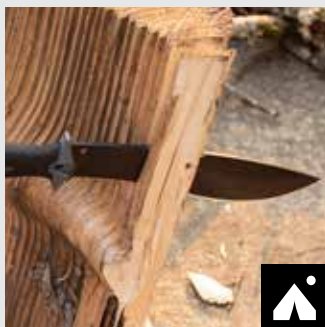

CHOOSE YOUR KERSHAW

> BY ACTIVITY

Office worker or avid outdoorsman—or both—Kershaw's got you covered. Our everyday carry knives come in a full range of styles, from gentlemanly to tactical to practical. They're offered in a full range of prices, too. For instance, for value-priced options, check out our Starter Series. You can also find activity-specific knives in the Outdoor, Hunting, and Fishing sections of this catalog.

EVERYDAY CARRY — You carry a knife because it's handy. Opening boxes, taming blister packs, trimming string, sharing a sandwich. In this section, you'll find a wide variety of handy pocketknives, for every type of job and to fit every type of pocket.

OUTDOOR — Gear to keep your campsite operating smoothly. Machetes to clear brush, camp saws to prep firewood. Check the Gear section too for other handy camp tools.

HUNTING — Here you'll find the essential blades for dressing your game. The LoneRock series offers fixed, folding, and replaceable-blade styles.

FISHING — Kershaw's K-Texture or soft-grip handles provide secure grip in wet and slippery conditions. Pair that with our razor-sharp blades and you've got the right tools for processing your catch.

> BY TECHNOLOGY OR STYLE

You can also choose your Kershaw by its opening mechanism—or the fact that it doesn't have one. Some people only want a pocketknife with assisted opening. Some only want one that's manual. Some want the stability of a fixed blade, while others prefer the versatility of a multi-function knife. Whatever technology, whatever style of knife you're looking for, Kershaw is the one.

AUTOMATIC OPENING —

The Kershaw Launch series has grown to eight sleek, fast, instant-open knives. A push-button lock holds the blade in place, but under pressure from a torsion spring. Pushing the button releases the lock and the blade springs open, ready for use.

SPEEDSAFE™ ASSISTED

OPENING — Kershaw launched a revolution with this. When closed, a torsion bar in the handle creates a bias toward the closed position. To open the knife, apply manual pressure to the thumb stud or flipper to overcome the torsion bar's resistance and open the knife.

MANUAL OPENING — No springs or torsion bars, manual-opening knives can be opened with a thumb stud, flipper, or hollow in the blade. Some manual knives also feature our KVT ball-bearing opening. (See KVT for more info.)

KVT OPENING — relies on a ring of “caged” ball bearings that surround the knife's pivot and enable the blade to move out of the handle smoothly when you pull back on the flipper. KVT makes opening manual knives as easy as assisted. Look for these in our EDC-Manual section.

WAVE SHAPED OPENING

FEATURE — Designed by Ernest Emerson, the unique wave shape is a hook that enables the user to open the knife as it is withdrawn from the pocket. You'll find this feature on our Kershaw–Emerson CQC-#K knives in the EDC Manual section.

MULTI-FUNCTION — When you're looking for a knife that does more, look to our multi-function pocketknives. They incorporate additional handy features like screwdrivers or bottle openers and just add to the convenience of carrying a knife.

FIXED BLADE — Since they don't fold closed, fixed blade knives are generally stored in a sheath or blade protector. Kershaw offers fixed blades in everything from camp tools to neck knives to hunting and fishing blades.

MANUFACTURING

PRECISION AND CRAFTSMANSHIP

Every Kershaw knife starts with American innovation, American design, and American engineering.

It comes to life with precision manufacturing and meticulous quality control—either in our Tualatin, Oregon factory, located in one of the USA's greatest centers of knife manufacturing, or in our overseas manufacturing facilities. Manufacturing depth like this enables us to build products for every budget and to meet demand throughout the US and worldwide.

While a knife may look simple, it's actually a complex piece of machinery. And, when it comes to production brands like Kershaw—building a million knives each year—the complexity only gets amplified. From CNC machines, precision grinders, lasers, and a factory-full of specialized equipment to hand-assembly and sharpening by hundreds of skilled workers, what it takes to get that knife into your hands is nothing short of amazing.

Next, each individual part of the knife, from blade to screws must be designed in real dimensions on the computer. The designer ensures the parts fit together precisely, function properly and, based on the knife's ultimate purpose, chooses the materials we'll use.

Once these questions are answered, our award-winning designers will create dozens of options for each knife. Finally, one is selected.

It always starts with function. What kind of knife do the end user, our retailers, and the market want and need? What style of knife should it be and at what price?

Now, the design is prototyped. Skilled machinists build about a dozen knives by hand. Based on their feedback, we refine the design as needed to make it production-ready.

If the knife is being manufactured in our Oregon facility, this data now goes to our production team. If it is being manufactured in China, it goes to the Chinese production team. Production begins, with parts manufactured, and assembly underway.

Next, each part must be translated to programs that interact with our production machinery. The machining and engineering teams write and refine these programs for each part in the “assembly,” that is, all the parts that make up the knife. In addition, the fixtures—the devices that locate and hold the individual pieces during the manufacturing process—must be designed, engineered, and programmed.

We stand behind every Kershaw knife. From high-end, premium-materials knives to value-priced models, every Kershaw provides plenty of bang for every hard-earned buck. Even our budget knives incorporate high-end technology. Because everyone deserves to own a knife with the style and function they really want. We are proud to be able to bring knife users products that they, in turn, are proud to own, carry, and use.

From our warehouse facility, Kershaw knives are shipped to Kershaw Authorized Dealers throughout the US and the world. And every one is backed by our Limited Lifetime Warranty.

All along the way, Kershaw Quality Control (QC) is in place—from parts inspection to final inspection before shipping. Our China-made products receive additional QC before they leave the factory, then again when they arrive in Oregon.

For knives proudly made in our Oregon USA factory, look for this symbol.

All other knives are proudly made in our factories in China. These products are designed and engineered in the USA, and manufactured in China.

LUCKY NUMBER 7

Seven years ago, Kershaw's brother brand, Zero Tolerance, launched the 0777. At the Blade Show that same year, the 0777 was named Overall Knife of the Year. And a legend was born.

Zero Tolerance went on to make several versions of the 0777: the 0770, with aluminum handles, 0770s with different blade and handle materials, as well as the current 0770CF.

But it wasn't enough.

Demand for this lightweight and versatile knife, inspired by the original award winner, continued to grow.

So, last year Kershaw introduced our own "7". Dubbed the Natrix, the 7007 was quickly snapped up by knife users. Then some of our awesome dealers commissioned their own versions in custom colors.

Now for 2018, Kershaw is introducing new versions, some bigger, some smaller, some with carbon fiber. If we count 'em all, it adds up to seven Natrixes ready for you in 2018.

BLADE STYLES

DROP POINT

The blade's point drops down below the blade's spine. Usually has good "belly," a curved cutting edge. It is one of today's most widespread blade shapes because it's a great all-purpose blade.

CLIP POINT

The tip of the clip point is lower than its spine. The top part of the blade has been "clipped" off so that the blade goes straight from spine to tip. The clip point can also have a concave curve to the tip. Clip points are great for everyday carrying, but are also favored for hunting knives.

WHARNCLIFF

A Wharncliffe blade has a completely straight cutting edge. The spine of the blade gradually slopes down to meet the edge to form a tip. The straight edge makes it great blade for slicing push cuts, for wood carving, and general cutting, and utility work.

SHEEPSFOOT

A sheepsfoot blade is similar to the Wharncliffe, but has a steeper slope from spine to edge and a less-pointy tip. They are often favored by emergency responders due to the relative safety of the rounded tip. The straight edge works well for slicing push cuts and general-purpose cutting.

SPEAR POINT

In a spear-point blade, the top and bottom of the blade are symmetrical and the tip is in line with the center of the blade. It may have one or both edges sharpened. It offers tactical style as well as excellent piercing.

AMERICAN TANTO

Angles upward to meet the spine. The angled edge can be straight or curved. The American tanto offers a strong, durable tip while the straight edge makes it ideal for push cuts.

RECURVE

Instead of having a fully convex belly, a recurve blade will also have a gentle concave curve along part of the cutting edge. This gives the edge something of an "S" shape. The recurve blade provides good belly for slicing and a concave curve for easy draw or pull cuts.

TRAILING POINT

A trailing-point blade has a tip that ends above the spine of the knife. Many trailing point knives also have a deep belly curve for superior slicing, including skinning and hunting use.

BLADE FINISHES & COATINGS

BEAD-BLASTED FINISH

The knife blade is "blasted" or sprayed with a mixture of fine media, including glass and aluminum-oxide beads, under high speed and pressure. This smooths the blade surface and creates a soft, non-reflective, matte look. Depending on the media, this finish can produce a darker or a lighter blade color.

BLACK-OXIDE COATING

A chemical bath converts the surface of the steel to magnetite; it enhances appearance and adds some corrosion resistance.

BLACKWASH™ FINISH

Our BlackWash™ finish produces a vintage look like that of well-used tool or favorite, broken-in pair of jeans. Kershaw products may have DLC BlackWash™ or black-oxide BlackWash™ finishes.

DLC COATING

Diamond-Like Carbon (DLC) coating displays properties similar to those of natural diamond, including hardness, wear resistance, and reduced friction.

DUAL FINISH

Sometimes Kershaw will combine two different blade finishes on a single blade, for example, satin finish on the blade upper and stonewash on the lower part of the blade.

POWDERCOAT

The coating is applied as a fine powder and cured under heat. This creates a smooth, even, and tough coating.

PVD COATING

PVD stands for Physical Vapor Deposition. Specialized materials are vaporized via a vacuum process. Then the vaporized material is deposited as a thin layer on selected objects. In our case, it enables us to finish our blades and/or handles with a thin coating that adds color and offers excellent wear and corrosion resistance.

SATIN FINISH

A Kershaw satin finish will typically show a faint pattern of vertical lines across the blade. It is a shinier finish than bead blasting and somewhat lighter in color.

STONEWASHED FINISH

Blades are tumbled with ceramic "stones," which gives the blade surface a desirable roughened or scuffed look. The look can be pronounced or subtle. The finish helps hide scratches and fingerprints.

TITANIUM CARBO-NITRIDE

Kershaw also uses titanium carbo-nitride to produce an attractive black or gray blade coating that increases the blade's hardness, helps maintain the edge, and increases the lifetime of the blade.

BLADE STEELS

CPM S30V HRC: 59.5–61
Large carbides in this all-around premium knife steel makes it take and hold an edge extremely well and is also very tough and wear resistant.
EDGE RETENTION: ▲▲▲▲▲▲▲▲▲▲
CORROSION RESISTANCE: ▲▲▲▲▲▲▲▲▲▲
SHARPENING EASE: ▲▲▲▲▲▲▲▲▲▲

CPM 154 HRC: 58–60
This powdered metallurgy steel has a more uniform distribution of carbides so it takes and holds an excellent edge. Also offers good corrosion resistance, wear resistance, and toughness.
EDGE RETENTION: ▲▲▲▲▲▲▲▲▲▲
CORROSION RESISTANCE: ▲▲▲▲▲▲▲▲▲▲
SHARPENING EASE: ▲▲▲▲▲▲▲▲▲▲

SANDVIK 14C28N HRC: 58–60
This high-performance steel was developed in a partnership between Kershaw and Sandvik Steel. Offers excellent corrosion resistance.
EDGE RETENTION: ▲▲▲▲▲▲▲▲▲▲
CORROSION RESISTANCE: ▲▲▲▲▲▲▲▲▲▲
SHARPENING EASE: ▲▲▲▲▲▲▲▲▲▲

8CR13MOV HRC: 57–59
Kershaw precision heat-treats 8Cr13MoV steel to bring out its very best high-performance characteristics: the ability to take and hold an edge, strength, and hardness.
EDGE RETENTION: ▲▲▲▲▲▲▲▲▲▲
CORROSION RESISTANCE: ▲▲▲▲▲▲▲▲▲▲
SHARPENING EASE: ▲▲▲▲▲▲▲▲▲▲

8CR14MOV HRC: 58–59
The formula for this steel has additional chromium for added stain resistance. It also benefits from Kershaw’s expertise in precision heat treatment.

420HC HRC: 58
This modified 420 steel has higher amounts of carbon and chromium to boost hardenability and corrosion resistance. It is an excellent everyday steel: tough, corrosion resistant, easy to sharpen and takes a good edge.
EDGE RETENTION: ▲▲▲▲▲▲▲▲▲▲
CORROSION RESISTANCE: ▲▲▲▲▲▲▲▲▲▲
SHARPENING EASE: ▲▲▲▲▲▲▲▲▲▲

420J HRC: 56–58
Highly stain resistant, but ductile, this steel is excellent for use where “flex” is desirable, for example, in fillet knives.
EDGE RETENTION: ▲▲▲▲▲▲▲▲▲▲
CORROSION RESISTANCE: ▲▲▲▲▲▲▲▲▲▲
SHARPENING EASE: ▲▲▲▲▲▲▲▲▲▲

D2 HRC: 59–60
This “semi-stainless” tool steel is known for excellent wear resistance and good toughness.
EDGE RETENTION: ▲▲▲▲▲▲▲▲▲▲
CORROSION RESISTANCE: ▲▲▲▲▲▲▲▲▲▲
SHARPENING EASE: ▲▲▲▲▲▲▲▲▲▲

DIN 1.4116 HRC: 55–57
Exceptionally corrosion resistant and very tough, this German stainless steel is one of the most popular steels for kitchen knives. It is very easy to resharpen when the time comes.

65MN HRC: 56
A tough, durable carbon steel designed for hard-use applications such as Kershaw’s Camp Series machetes.

3CR13 HRC: 54–56
A value-priced high-chromium stainless steel.

4CR14 HRC: 55–57
A value-priced steel; very highly stain resistant.

LOCKS

FRAME LOCK

In a frame lock knife, the knife handle—its “frame”—consists of two plates of material on either side of the blade. When the knife is opened, one side of the frame butts up against the back end of the blade and prevents the blade from closing until released. The thickness of the frame material blocking the blade open makes the frame lock extremely sturdy.

HAWK LOCK

The Hawk Lock uses a principle similar to other locks to secure the blade open. But instead of part of the frame or liner moving into place, a spring-loaded latch plate in the knife handle moves to contact a steel pin on the blade, locking the blade open. To close the knife, just pull the lock slider toward the butt of the knife and fold the blade back into the handle.

INSET LINER LOCK

The inset liner lock is a Kershaw variation on the liner lock. Kershaw insets a sturdy steel plate on the inside of the knife's handle. It is riveted into place in a custom-machined cutout on the interior of the handle. This enables us to make a knife with a slimmer profile that won't weigh your pocket down, while still providing the strength and security of a locking liner.

LINER LOCK

The most common of today's blade-locking systems. The handle consists of two metal plates (the “liner”) on either side of the blade. When the knife is opened, one side of the liner butts up against the backend of the blade and prevents the blade from closing until released. A secure and convenient way to make using a Kershaw folding knife even safer.

MID-LOCK

The oldest of the popular blade-locking systems, yet the principle is the same as with the others. Once the knife is opened, a steel bar locks into place behind the blade and prevents the knife from closing until released by the knife user.

PUSH-BUTTON LOCK

Like Kershaw's other locking systems, once the blade is open, a mechanism blocks the butt end of the blade and prevents it from closing accidentally. In this case, a spring-loaded lock is built into one side of the handle that must be depressed in order to unlock the blade.

SUB-FRAME LOCK

The patented Kershaw Sub-Frame Lock is a variation on the traditional frame lock. In this case, a piece of a lighter weight frame, like G10, is machined out and a piece of steel is screwed into its place. This steel acts like a standard frame lock. It enables us to make a knife with a slimmer profile, while still providing the strength and security of a frame lock.

TIP-LOCK

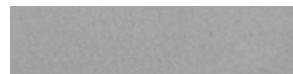

The Tip-Lock can be found on all Leek, Scallion, and Chive SpeedSafe® knives. It's a simple slider that, when engaged, ensures the blade will not accidentally open. It's especially helpful in cases where the knife might be juggled in a briefcase, backpack, or purse.

HANDLE MATERIALS

ANODIZED ALUMINUM

Anodizing makes aluminum stronger and enables Kershaw to add scratch and fade resistant color to knife handles.

CARBON FIBER

Carbon fiber atoms are bonded together in crystals aligned in long strands, then woven together like fibers. Combined with resin to make the fibers rigid, carbon fiber makes a knife handle material that is extremely strong and extremely lightweight.

COPPER

Denser and heavier than iron, this natural metal starts out reddish-orange in color, but over time will gain a patina, like a copper penny. The patina is a result of oxidation and the colors it turns will change with time as well. Copper makes an interesting knife handle material due to the changing patina. Depending on how you handle and use it, the knife will look different throughout its life.

CO-POLYMER PLASTIC

A co-polymer is a compound of two or more different molecules, chosen for specific characteristics. The co-polymers Kershaw uses for knife handles generally have a slightly rubbery texture to improve grip security.

G10

An epoxy-filled woven glass fiber; it is extremely stable, unaffected by temperature changes, and makes excellent handles and handle scales for knives.

GLASS-FILLED NYLON

Nylon synthetic polymer is reinforced with glass threads for increased strength, stiffness, and dimensional stability combined with excellent wear resistance.

K-TEXTURE™ GRIP

An exclusive texture and pattern used on the handle of certain Kershaw knives. K-Texture™ enhances a secure grip.

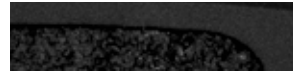

STAINLESS STEEL

An alloy of iron and carbon, most steel also has additional elements alloyed in it to enhance specific characteristics. As a handle material, stainless steel is strong and attractive.

TRAC-TEC INSERTS

A rough-surfaced rubber insert that provides additional friction for a non-slip grip.

POCKETCLIPS

SINGLE-POSITION

The pocketclip is mounted in a single, fixed position on the knife handle.

REVERSIBLE

Right-handed, tip-up or tip-down
OR
Right- or left-handed, tip-up

3-POSITION

Right-handed, tip-up or tip-down
AND
Left-handed, tip-up

4-POSITION

Right-handed, tip-up or tip-down
AND
Left-handed, tip-up or tip-down

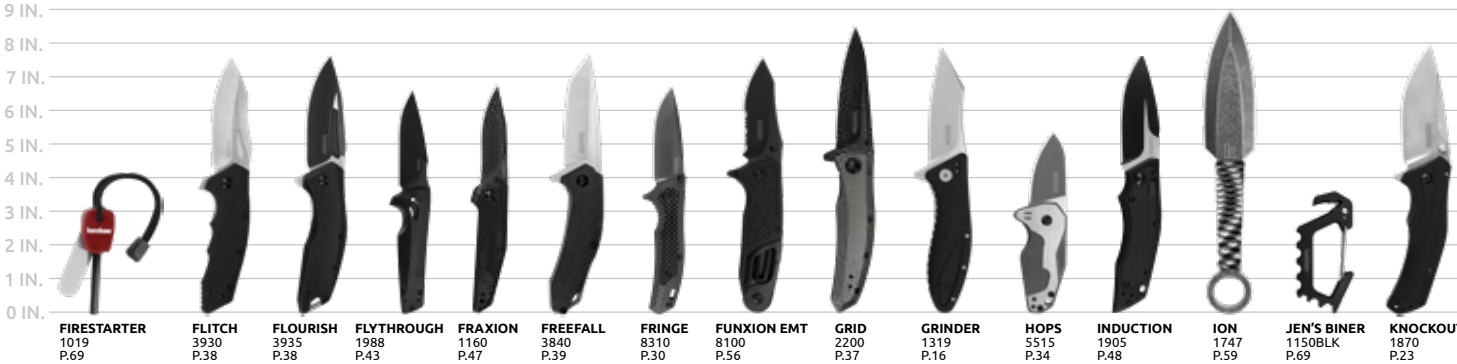

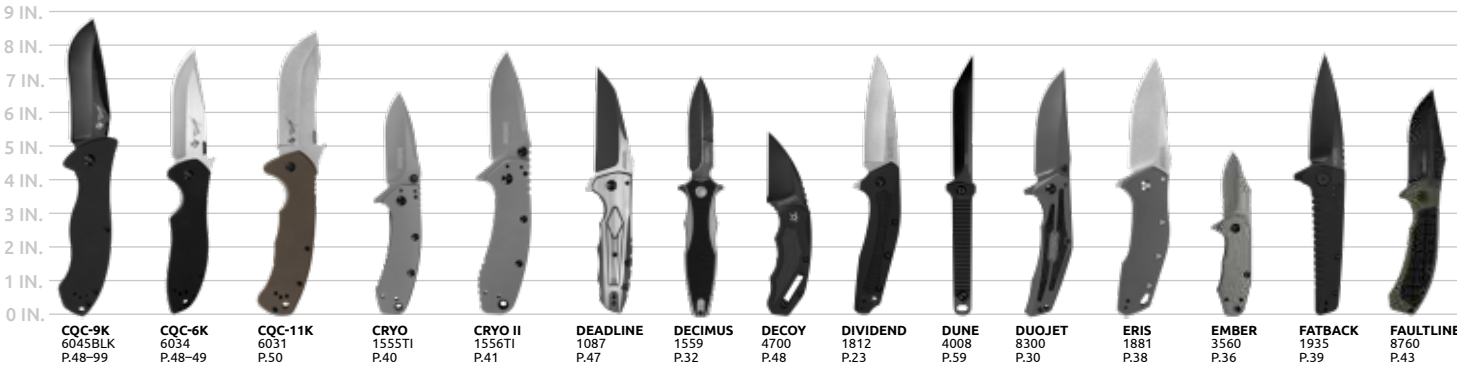

DEEP-CARRY

This specially designed pocketclip is positioned at the very end of the handle so that the knife can be carried deeper inside the pocket.

LIMITED LIFETIME WARRANTY

Kershaw Knives from Kai USA Ltd. carry a limited warranty for the lifetime of the original owner, except when stated otherwise. We guarantee our knives against manufacturing defects in material and construction and to perform as advertised when properly used and maintained. The Limited Lifetime Warranty is non-transferable and does not extend to normal signs of wear, rust, damage or breakage due to improper use, improper maintenance, accidents, loss, or theft. This warranty is void on products that have been modified in any way. Any product we determine to be defective will be repaired or replaced solely at our discretion. To receive warranty repair or replacement, the owner must send the product to be evaluated by Kai USA Warranty Services in our Tualatin, Oregon headquarters. In addition to the provisions of this warranty, the owner may also have other rights that can vary by state. The Limited Lifetime Warranty does not apply to the TX Tool. No other warranties are implied or expressed other than what is specifically stated here. Kai USA Ltd. reserves the right to determine what constitutes normal wear, improper use/maintenance, and modification.

We reserve the right to make changes to this warranty at our discretion and without notice.

For warranty information, shipping tips, and the Warranty/Repair Form required for warranty service, please visit our website:
kershawknives.com

BLADE REPLACEMENT

If you accidentally break your Kershaw folder's blade, we can replace it for just \$10. Blades that break due to a manufacturing defect will still be replaced under warranty, free of charge.

VOUCHERS

There may be cases when a Kershaw knife has been evaluated and is eligible for warranty service, but may not be able to be repaired or replaced. This can be true with discontinued models for which we may no longer have parts or stock. In such cases, at our discretion, we will issue a voucher for the original Manufacturer's Suggested Retail Price. The voucher value can then be applied to the purchase of a current-model Kershaw—directly from us. If you also wish to have your original knife returned, please call our warranty team toll-free: 1-800-325-2891. We will retain the knife for 30 days from the date the voucher is issued. If it is not reclaimed by then, the knife will be recycled.

LIABILITY DISCLAIMER

Kershaw Knives are intended and sold for legitimate everyday carry and/or sporting purposes only. The purchase, use, and ownership of knives are subject to a wide variety of federal, state, and local laws and regulations. Always comply with all laws and regulations in effect in your area. Due to the complexity and constantly changing nature of these laws and regulations, it is the responsibility of the buyer to investigate and comply with the laws and regulations that apply in his or her specific area. You, and not Kai USA Ltd., are solely responsible for any claims resulting from violation of these laws and/or regulations.

WARNING!

Knives are extremely sharp tools and should only be used or handled with the utmost care and caution. Any use other than cutting (such as prying or twisting) is considered misuse and abuse—and will void your warranty. Kershaw Knives/Kai USA Ltd. is not responsible for any injuries resulting from misuse or abuse of the product.

Do not use any Kershaw knife as a throwing knife or a stabbing device. Throwing knives and knives developed for stabbing have a distinctly different design and function. Kershaw knives are not intended for throwing or stabbing; they are designed for cutting purposes only.

We reserve the right to change shipping terms, specifications, materials, or discontinue products at any time, without notice.

Kershaw Products are covered by one or more pending and issued U.S. patents: 4,715,121; 4,741,106; 5,802,722; 5,815,927; 6,006,385; 6,397,476; 6,388,431; 6,412,130; 6,145,202; 6,223,372; 6,338,431; 6,378,214; 6,397,476; 6,427,334; 6,591,504; 7,086,158; 7,370,421; 7,395,599; 9,120,234; D303,748; D316,802; D317,390; D321,818; D329,185; D348,818; D351,328; D365,725; D366,605; D375,243; D392,131; D410,833; D437,197; D438,085; D450,228; D454,043; D454,768; D455,062; D467,783; D474,669; D479,104; D479,114; D484,770; D488,045; D565,918; D566,222; D569,212; D570,180; D572,542; D572,562; D575,614; D576,466.
